Towards a Neutral Formulary Apportionment System in Regional Integration Shu-Chien Chen, 2023-03-09 International tax regimes and practices are heavily criticized for failing to fairly levy corporate tax on giant multinational taxpayers in the current globalized and digitalized world This important and far seeing book demonstrates how formulary apportionment FA an approach by which a multinational corporation pays each jurisdiction s corporate tax based on the share of its worldwide income allocated to that jurisdiction can achieve the much sought goal of aligning value creation and taxation The author through an intensive analysis of the European Union s EU s Common Consolidated Corporate Tax Base CCCTB Directive Proposal s and comparison to the United States US s formulary apportionment experience shows how the perceived problems with an FA system can be overcome and lays out the necessary elements for its feasibility With detailed attention to the debates around formulary apportionment and its theoretical foundations the book provides a blueprint for rebuilding the normative framework for the EU s tax reform by clearly analysing the implications of the following and more theorising public benefits to be represented by taxation reorganising different economic theories about tax neutrality and tax justice advancing the comparative legal research methodology to analyse law reform by combining the functional approach and the problem solving approach designing the logical formulary apportionment system for digital economy ensuring the removal of the incentive for multinationals to shift reported income to low tax locations reducing the tax system s complexity and the administrative burden it imposes on firms eliminating transfer pricing complexity for intra firm transactions achieving equal weighting of the sales factor the labour factor and the asset factor in

the formula application of destination based rule for attributing the sales factor and replacing the traditional permanent establishment nexus with a factor presence nexus The presentation incorporates extensive comparison between the EU s formulary apportionment tax reform option and FA systems existing in the United States US at state level including reference to relevant US case law and legislation As a possible option to address the problem of base erosion and profit shifting BEPS formulary apportionment is gaining increasing acceptance and attention This book will prove invaluable to taxation authorities tax practitioners and scholars in its deeply informed and systematic guidance on good practices and prevention of problematic experiences in establishing and implementing an effective and market neutral FA system **Policy and Choice**

William J. Congdon, Jeffrey R. Kling, Sendhil Mullainathan, 2011-04-01 Traditional public finance provides a powerful framework for policy analysis but it relies on a model of human behavior that the new science of behavioral economics increasingly calls into question In *Policy and Choice* economists William Congdon Jeffrey Kling and Sendhil Mullainathan argue that public finance not only can incorporate many lessons of behavioral economics but also can serve as a solid foundation from which to apply insights from psychology to questions of economic policy The authors revisit the core questions of public finance armed with a richer perspective on human behavior They do not merely apply findings from psychology to specific economic problems instead they explore how psychological factors actually reshape core concepts in public finance such as moral hazard deadweight loss and incentives Part one sets the stage for integrating behavioral economics into public finance by interpreting the evidence from psychology and developing a framework for applying it to questions in public finance In part two the authors apply that framework to specific topics in public finance including social insurance externalities and public goods income support and redistribution and taxation In doing so the authors build a unified analytical approach that encompasses both traditional policy levers such as taxes and subsidies and more psychologically informed instruments The net result of this innovative approach is a fully behavioral public finance an integration of psychology and the economics of the public sector that is explicit systematic rigorous and realistic

Behavioral Public Finance Edward J. McCaffery, Joel Slemrod, 2006-01-23 Behavioral economics questions the basic underpinnings of economic theory showing that people often do not act consistently in their own self interest when making economic decisions While these findings have important theoretical implications they also provide a new lens for examining public policies such as taxation public spending and the provision of adequate pensions How can people be encouraged to save adequately for retirement when evidence shows that they tend to spend their money as soon as they can Would closer monitoring of income tax returns lead to more honest taxpayers or a more distrustful uncooperative citizenry Behavioral Public Finance edited by Edward McCaffery and Joel Slemrod applies the principles of behavioral economics to government s role in constructing economic and social policies of these kinds and suggests that programs crafted with rational participants in mind may require redesign Behavioral Public Finance looks at several facets of economic life and asks how behavioral

research can increase public welfare Deborah A Small George Loewenstein and Jeff Strnad note that public support for a tax often depends not only on who bears its burdens but also on how the tax is framed For example people tend to prefer corporate taxes over sales taxes even though the cost of both is eventually extracted from the consumer James J Choi David Laibson Brigitte C Madrian and Andrew Metrick assess the impact of several different features of 401 k plans on employee savings behavior They find that when employees are automatically enrolled in a retirement savings plan they overwhelmingly accept the status quo and continue participating while employees without automatic enrollment typically take over a year to join the saving plan Behavioral Public Finance also looks at taxpayer compliance While the classic economic model suggests that the low rate of IRS audits means far fewer people should voluntarily pay their taxes than actually do John Cullis Philip Jones and Alan Lewis present new research showing that many people do not underreport their incomes even when the probability of getting caught is a mere one percent Human beings are not always rational utility maximizing economic agents Behavioral economics has shown how human behavior departs from the assumptions made by generations of economists Now Behavioral Public Finance brings the insights of behavioral economics to analysis of policies that affect us all

Taxes and Unemployment Laszlo Goerke, 2012-12-06 This chapter has set out in detail the models which are employed below in order to analyse the labour market effects of changes in tax rates and in alterations in the tax structure The fundamental mechanisms underlying the different approaches have been pointed out Moreover vital assumptions have been emphasised By delineating the models which are used for the subsequent analyses implicitly statements have also been made about topics or aspects which this study does not cover For example all workers and firms are identical ex ante However ex post differences are allowed for inter alia if unemployment occurs or if some firms have to close down These restrictions indicate areas of future research insofar as that the findings for homogeneous workers or firms yield an unambiguous proposal for changes in tax rates or the tax structure in order to promote employment This is because it would be desirable for tax policy to know whether the predicted effects also hold in a world with ex ante heterogeneity Furthermore the product market has not played a role Therefore repercussions from labour markets outcomes on product demand and vice versa are absent 55 Moreover neither the process of capital accumulation be it physical or human capital nor substitution possibilities between labour and capital in the firms production function are taken into account Finally international competition is not modelled
