*The Future of Internal Combustion Engines* Antonio Paolo Carlucci,2019-09-11 Based on previsions the reciprocating internal combustion engine will continue to be widely used in all sectors transport industry and energy production Therefore its development while complying with the limitations of pollutants as well as CO<sub>2</sub> emission levels and maintaining or increasing performance will certainly continue for the next few decades In the last three decades a significant effort has been made to reduce pollutant emission levels More recently attention has been given to CO<sub>2</sub> emission levels too It is widely recognized that one single technology will not completely solve the problem of CO<sub>2</sub> emissions in the atmosphere Rather the different technologies already available will have to be integrated and new technologies developed to obtain substantial CO<sub>2</sub> abatement
