

Rigid shaft made of corrosion resistant stainless steel minimizes the shaft deflection < 0.05 mm: the design is in "dry shaft execution" where there is no contact between shaft and medium.

- CSS Single mechanical seal
- CDC Double cartridge mechanical seal
- Single-acting and double-acting mechanical seals configuration, also on cartridge execution

All PFA components are made through Transfer Moulding process. The Transfer Moulding process is also employed for PVDF/PP casing and seal chambers.

The bearing frame can be equipped with 2 different type of protections:

- Standard oil seal
- Non-contacting labyrinth seal

All the UCL pumps can be equipped with closed or open radial impeller, single stage execution.

Easy-to-replace slip-on shaft sleeve facilitates seal maintenance in the field and reduces long-term maintenance costs.

It is made by a core of high-strength stainless steel, covered by PFA through Transfer moulding process.

Oil sump with enlarged volume ensures cool and clean oil.

Pump design grants a modular configuration on both long-coupled and close-coupled execution.

All wetted parts have a high chemical resistance employing a performing material as Virgin unfilled PFA, granting also a wall thickness of at least 4 mm to 5 mm. Alternative available materials for the wetted parts: PP and PVDF.
