Garrity, 2001-11-12 Beginning graduate students in mathematics and other quantitative subjects are expected to have a daunting breadth of mathematical knowledge But few have such a background This book will help students to see the broad outline of mathematics and to fill in the gaps in their knowledge The author explains the basic points and a few key results of all the most important undergraduate topics in mathematics emphasizing the intuitions behind the subject The topics include linear algebra vector calculus differential geometry real analysis point set topology probability complex analysis abstract algebra and more An annotated bibliography then offers a guide to further reading and to more rigorous foundations This book will be an essential resource for advanced undergraduate and beginning graduate students in mathematics the physical sciences engineering computer science statistics and economics who need to quickly learn some serious mathematics

Algebraic Foundations for Applied Topology and Data Analysis Hal Schenck, 2022-11-21 This book gives an intuitive and hands on introduction to Topological Data Analysis TDA Covering a wide range of topics at levels of sophistication varying from elementary matrix algebra to esoteric Grothendieck spectral sequence it offers a mirror of data science aimed at a general mathematical audience The required algebraic background is developed in detail The first third of the book reviews several core areas of mathematics beginning with basic linear algebra and applications to data fitting and web search algorithms followed by quick primers on algebra and topology The middle third introduces algebraic topology along with applications to sensor networks and voter ranking The last third covers key contemporary tools in TDA persistent and multiparameter persistent homology Also included is a user s guide to derived functors and spectral sequences useful but somewhat technical tools which have recently found applications in TDA and an appendix illustrating a number of software packages used in the field Based on a course given as part of a masters degree in statistics the book is appropriate for graduate students **Excursions in Number Theory, Algebra, and Analysis** Kenneth Ireland, Al Cuoco, 2023-03-27 This

textbook originates from a course taught by the late Ken Ireland in 1972 Designed to explore the theoretical underpinnings of undergraduate mathematics the course focused on interrelationships and hands on experience Readers of this textbook will be taken on a modern rendering of Ireland s path of discovery consisting of excursions into number theory algebra and analysis Replete with surprising connections deep insights and brilliantly curated invitations to try problems at just the right moment this journey weaves a rich body of knowledge that is ideal for those going on to study or teach mathematics A pool of 200 Dialing In problems opens the book providing fuel for active enquiry throughout a course The following chapters develop theory to illuminate the observations and roadblocks encountered in the problems situating them in the broader mathematical landscape Topics cover polygons and modular arithmetic the fundamental theorems of arithmetic and algebra

irrational algebraic and transcendental numbers and Fourier series and Gauss sums A lively accompaniment of examples exercises historical anecdotes and asides adds motivation and context to the theory Return trips to the Dialing In problems are encouraged offering opportunities to put theory into practice and make lasting connections along the way Excursions in Number Theory Algebra and Analysis invites readers on a journey as important as the destination Suitable for a senior capstone professional development for practicing teachers or independent reading this textbook offers insights and skills valuable to math majors and high school teachers alike A background in real analysis and abstract algebra is assumed though the most important prerequisite is a willingness to put pen to paper and do some mathematics
