Diagnostic Writing Assessment Ute Knoch, 2009 The diagnostic assessment of writing is an important aspect of language testing which has often been neglected in the literature. However, it is an area which poses special challenges to practitioners both in the classroom and in large scale testing situations. This book presents a study which set out to develop and validate a rating scale specifically designed for the diagnostic assessment of writing in an academic English setting. The scale was developed by analysing a large number of writing performances produced by both native speakers of English and learners of English as an additional language. The rating scale was then validated using both quantitative and qualitative methods. The study showed that a detailed data based rating scale is more valid and more useful for diagnostic purposes than the more commonly used impressionistic rating scale. Academic Assessment and Intervention brings together divergent approaches in order to demonstrate that scientific evidence rather than biases or previous practice must determine assessment practices that are selected and used for particular purposes. Similar to a handbook in its comprehensive topical coverage, this edited collection provides a contextual foundation for academic assessment and intervention, describes both norm referenced and curriculum based assessment measurement in detail, considers the implications of both of these assessments on ethnically diverse populations, provides a clear link between assessment evidence based interventions and the RTI model, and considers other important topics related to this area such as teacher behavior. Intended primarily for graduate level courses in education, school psychology or child clinical psychology, it will also be of interest to practicing professionals in these fields. **Ornamental Horticulture Technology** United States.
