### Comment your work along the way

Write a “log file” as you work. Write down explicitly what kind of measures, controls, of counterbalancing you do with your stimuli, what kind of decisions you take as the work comes along. It will ease the writing process later. Be specific and detailed. The best is a sort of journal format.

You will have forgotten most of it by the time you get the results and then it is REALLY hard to remember all those thoughts and decisions you made during the planning phase and at the beginning of the experiment. The crucial point here is that – at least in a dissertation, and in most journal publications – you have to justify and report on those decisions you made, and on the ways you measured and controlled things (e.g. stimuli, acoustic analysis, selection of participants, criteria for exclusion or inclusion of data...).

This helps also to be systematic. Let me give you an example: if you do some acoustic measurements on consonant clusters over a few weeks. On Monday, you start and set the label for the beginning of the consonant clusters (without determining exact guidelines), you do 43% of the work. The following week, on a Wednesday, you want to continue, but you are not sure anymore what were the criteria you used to set boundaries, so you do it a slightly different way without really being aware of it. Up to 90% of the work. Then, 3 weeks later, you finish it for the last 10%. But you really don't remember a thing and do it a third way. The bad news is, it might happen to interact with the reaction times of the subjects, because the time reaction measure was set from the beginning of the consonant cluster – for example. But you don't know that yet.

Now, at the end of the experiment, some strange things come out and you wonder if it has something to do with the way you set the boundary around the clusters... but you can't remember a thing of what you did, worse, you can't even remember if you did it systematically or not !! and the only way to check it is to look at each single file and try to figure your thoughts back then – ok with 10 files, but less fun with 288.... And then you think you remember the Monday way, but you don't remember which files were which.... a nightmare.
