Pure Mathematics Paper 1 November 2013 Memorandum:

Curvature: A Variational Approach A. Agrachev, D. Barilari, L. Rizzi, 2019-01-08 The curvature discussed in this paper is a far reaching generalization of the Riemannian sectional curvature The authors give a unified definition of curvature which applies to a wide class of geometric structures whose geodesics arise from optimal control problems including Riemannian sub Riemannian Finsler and sub Finsler spaces Special attention is paid to the sub Riemannian or Carnot Carathéodory metric spaces The authors construction of curvature is direct and naive and similar to the original approach of Riemann In particular they extract geometric invariants from the asymptotics of the cost of optimal control problems Surprisingly it works in a very general setting and in particular for all sub Riemannian spaces **Social Robots in Education** Georgios Lampropoulos, Stamatios Papadakis, 2025-05-03 This book focuses on recent advances in the field of social robots and their integration in education It elaborates on the progressive evolution of human robot interaction and educational robotics the emergence of digital pedagogy and the implementation of personalized learning methodologies The book also examines the use of artificial intelligence AI in education through the lenses of social robots Hence the book offers an overview of recent research into the adoption integration advancements and impact of social robots and AI in education and presents guidelines and suggestions on how to integrate them in classrooms Specifically the book Provides an in depth overview of social robots and their use in education Presents the advances of social robots and AI in education Showcases innovative solutions and outcomes of integrating social robots in classrooms Discusses the challenges benefits and future research directions of using social robots and AI in education *Knot Invariants and Higher Representation Theory* Ben Webster, 2018-01-16 The author constructs knot invariants categorifying the quantum knot variants for all representations of quantum groups He shows that these invariants coincide with previous invariants defined by Khovanov for sl and sl and by Mazorchuk Stroppel and Sussan for sl The author's technique is to study 2 representations of 2 quantum groups in the sense of Rouquier and Khovanov Lauda categorifying tensor products of irreducible representations These are the representation categories of certain finite dimensional algebras with an explicit diagrammatic presentation generalizing the cyclotomic quotient of the KLR algebra When the Lie algebra under consideration is sl the author shows that these categories agree with certain subcategories of parabolic category for gl Algebraic $\overline{\mathbb{Q}}$ -Groups as Abstract Groups Olivier Frécon, 2018-10-03 The author analyzes the abstract structure of algebraic groups over an algebraically closed field For of characteristic zero and a given connected affine algebraic Q group the main theorem describes all the affine algebraic Q groups such that the groups and are isomorphic as abstract groups In the same time it is shown that for any two connected algebraic Q groups and the elementary equivalence of the pure groups and implies that they are abstractly isomorphic In the final section the author applies his results to characterize the connected algebraic groups all of whose abstract automorphisms are standard when is either Q or of positive characteristic In characteristic zero a fairly general criterion is exhibited **Symbolic Extensions of**
