Psychological Interventions for Psychosis Juan Antonio Díaz-Garrido, Raquel Zúñiga, Horus Laffite, Eric Morris, 2023-05-27 This book shows how psychological and social interventions can help people with psychosis. It brings together both theoretical chapters that contribute to the reconceptualization of psychosis and clinical cases illustrating how contemporary psychotherapeutic intervention models can be applied in the treatment of this mental health condition with reflections, strategies, and practical guidelines demonstrating how these models can inform professional practice in mental healthcare. Chapters brought together in this volume aim to reflect a paradigm shift in psychosis care. They present person-centered models that lead to a way of seeing, understanding, and treating psychosis that is very different from the traditional biomedical model. Current authors and approaches are revolutionizing an outdated model trapped in purely pharmacological actions and tautological explanations of a biological nature where symptom control is the basic and fundamental form of

approach and in which psychotherapeutic actions take second place as subsidiary to the former Approaches such as Acceptance and Commitment Therapy Acceptance and Recovery Therapy by Levels Open Dialogue Compassion Centered Therapy or the Hearing Voices movement to name but a few of those presented in this book represent a journey of self knowledge and learning for those recovering from psychosis and have an intense transformative potential for the therapeutic team The fundamental principle that guides this book is to share models belonging to psychology that aim at personal development while respecting the needs values and goals of each person and that can be adopted by any professional or student of clinical psychology psychiatry nursing social work or any other discipline searching for more humanistic approaches to treat psychosis

Basic and applied research on deception and its detection Wolfgang Ambach,Matthias Gamer,2014-08-07 Deception is a ubiquitous phenomenon in social interactions and has attracted a significant amount of research during the last decades The majority of studies in this field focused on how deception modulates behavioral autonomic and brain responses and whether these changes can be used to validly identify lies Especially the latter question which historically gave rise to the development of

psychophysiological lie detection techniques has been driving research on deception and its detection until today. The detection of deception and concealed information in forensic examinations currently constitutes one of the most frequent applications of psychophysiological methods in the field. With the increasing use of such methods, the techniques for detecting deception have been controversially discussed in the scientific community. It has been proposed to shift from the original idea of detecting deception per se to a more indirect approach that allows for determining whether a suspect has specific knowledge of crime-related details. This so-called Concealed Information Test is strongly linked to basic psychological concepts concerning memory, attention, orienting, and response monitoring. Although research in this field has intensified with the advancement of neuroimaging techniques such as PET and fMRI in the last decade, basic questions on the psychological mechanisms underlying modulatory effects of deception and information concealment on behavioral, autonomic, and brain responses are still poorly understood.

This Research Topic brings together contributions from researchers in experimental psychology, psychophysiology, and neuroscience focusing on the understanding of the broad concept of deception, including the detection of concealed information with respect to basic research questions as well as applied issues. This Research Topic is mainly composed of original research articles, but reviews and papers elaborating on novel methodological approaches have also been included. Experimental methods include, but are not limited to, behavioral, autonomic, electroencephalographic, or brain imaging techniques that allow for revealing relevant facets of deception on a multimodal level. While this Research Topic primarily includes laboratory work, relevant issues for the field use of such methods are also discussed.
