Currently there are over ten different biometrics systems that are either widely used or under development. Some automated biometrics such as fingerprint identification and speaker verification have received considerable attention over the past 25 years and some issues like face recognition and iris based authentication have been studied extensively resulting in successful development of biometrics systems in commercial applications. However very few books are exclusively devoted to such issues of automated biometrics. *Automated Biometrics Technologies and Systems* systematically introduces the technologies and systems and explores how to design the corresponding systems with in depth discussion. The issues addressed in this book are highly relevant to many fundamental concerns of both researchers and practitioners of automated biometrics in computer and system security. *Kalyana Mitra: Volume 2* Prof. Katta Narasimha Reddy, Prof. E.
