Electronic Dissipation Processes

During Chemical Reactions on Surfaces Kevin Stella, 2011 Every day in our life is larded with a huge number of chemical reactions on surfaces Some reactions occur immediately for others an activation energy has to be supplied Thus it happens that though a reaction should thermodynamically run off it is kinetically hindered Meaning the partners react only to the thermodynamically more stable product state within a mentionable time if the activation energy of the reaction is supplied With the help of catalysts the activation energy of a reaction can be lowered Such catalytic processes on surfaces are widely used in industry Around 90% of chemicals are produced via a heterogeneously catalyzed process where a reaction occurs on the surface of a catalyst However why is it generally possible that such reactions run off with the help of heterogeneous catalysis meaning with lower activation energy than without presence of a catalyst What happens with the energy which is released during a reaction of gas particles on surfaces How is this energy released when some part of the energy is transferred to the reactant and some to the chemically active surface Which physical mechanisms play a key role in the energy transfer These questions are summarized in the concept of the energy dissipation To observe this energy dissipation phenomenon we use a new method the chemoelectronics With this method we try to detect the released energy induced by reactions on surfaces via thin layered electronic device elements An aim of this work is to build up very sensitive chemoelectronic sensors to measure electronic excitations released during such simple reactions of molecules as adsorption and desorption and more complicated reactions as the water formation reaction Therefore a new line of chemoelectronic sensors is developed and characterized in terms of internal photoemission and stability Meaning the previously used aluminum Al AlOx Ag and tantalum based Ta TaOx Au metal insulator metal sensors MIM are tested and new titanium based Ti TiOx Au MIMs are developed Additionally silicon based stepped metal insulator semiconductor sensors stepped MIS Si SiOx Au Si SiOx Pt are set up and characterized For the characterization of the chemoelectronic sensors the process of internal photoemission is used Both chemical and photoexcitation release hot charge carriers electrons and holes Due to the existence of excited carriers in the sensor a current can be measured without applying a bias voltage It will be shown that the chemo and the photosensitivity are strongly related to each other As a first experiment for the chemical selectivity of the detectors a stream of excited hydrogen molecules and hydrogen atoms is used The excitation and radical formation is produced by the interaction of ground state molecules with a hot tungsten surface according to the pioneering experiments of Irving Langmuir Additionally excited oxygen beams are studied in this work *Greenhouse climate control* J.C. Bakker, G.P.A. Bot, H. Challa, N.J. van de Braak, 2023-08-28 This publication emphasises that an interdisciplinary and multi disciplinary cooperation of scientists throughout the world is important in solving the complex problems facing the greenhouse industry The book itself is an outstanding example of such cooperation The aim of the book is to describe and analyse crop production in greenhouses in relation to climate control to redefine the problem of optimal control from a theoretical point of view and to provide a suitable framework for the design of new scientifically based control systems

Though the principles are generally applicable they are discussed against the background of the Dutch greenhouse industry To provide the reader with some background information the historical developments and the economic position of the Dutch horticultural industry are briefly reviewed in the introductory chapter this book will certainly become a reference as such an extensive review on the greenhouse crop system and its control is lacking for research and teaching Scientia Horticultura
