

# Punnett Square

A Punnett square is used to predict the possible genotypes of offspring from certain parents. In a Punnett square, the alleles for one parent are written along the top of the square. The alleles for the other parent are written along the side of the square. The possible genotypes of the offspring are found by combining the letters at the top and side of each square.

The book's insights will help make assessment a dynamic classroom process of fine tuning how and what you teach. **The Science I Know** Suzanna Roman-Oliver, 2024-07-08. The Science I Know Culturally Relevant Science Lessons from Secondary Classrooms is a collection of culturally relevant lesson plans written by secondary science teachers. Each lesson discusses how the tenets of academic success, cultural competence, and critical consciousness that are part of the theory of Culturally Relevant Pedagogy (CRP) are addressed (Ladson Billings, 1995). Additionally, each lesson plan is structured following the 5E learning cycle (Bybee, 2006) and aligned to the Next Generation Science Standards (NAS, 2012). The goal of this book is to help science teachers understand how to go about designing lessons that are culturally relevant. The hope is that the lessons that are detailed in each chapter will inspire teachers to draw the cultural knowledge from their students and capitalize on it when designing science lessons. After an introductory chapter that discusses how science education has shifted in recent decades to address the needs of diverse students, the main body of the text is divided into three sections. The first part introduces Culturally Relevant Pedagogy (CRP) as a framework; this is important for those readers unfamiliar with Gloria Ladson Billings' work. It addresses and discusses the three tenets of CRP: Academic Success, Cultural Competence, and Critical Consciousness, and it includes an explanation of how each area can be observed and addressed in science education, specifically. The second part features lesson plans from secondary science classrooms written by teachers from different subject areas, i.e., life science, physical science, earth science, etc. The lesson plans follow the 5E Instructional Model (Bybee et al., 2006). This model promotes inquiry by guiding teachers in the design of lesson plans that are based upon cognitive psychology, constructivist learning theory, and best practices in science teaching (Duran, Education and Culture Learner Differences). Secondary Science Pedagogy: Culturally Relevant Science and Multicultural Education. **EdPsych Modules** Cheryl Cisero Durwin, Marla Reese-Weber, 2020-01-07. EdPsych Modules uses an innovative modular approach and case studies based on real-life classroom situations to address the challenge of effectively connecting theory and research to practice. Succinct stand-alone modules are organized into themed units and offer instructors the flexibility to tailor the book's contents to the needs of their course. The units begin with a set of case studies written for early childhood, elementary, middle, and secondary classrooms, providing students with direct insight into the dynamics influencing the future students they plan to teach. All 25 modules highlight diversity, emphasizing how psychological factors adapt and change based on external influences such as sex, gender, race, language, disability status, and socioeconomic background. The Fourth Edition includes over three hundred new references across all 25 modules and expanded coverage of diversity in new diversity-related research. This title is accompanied by a complete teaching and learning package. **Using Problem-based Learning and Hands on Activities to Teach Meiosis and Heredity in a High School Biology Classroom** Tracie Dianne Krawczyk, 2007. Growing and Sustaining Student-Centered Science Classrooms David Stroupe, 2023-03-24. AACTE 2024. Gloria J. Ladson Billings.

Outstanding Book Award A wealth of practical tools and guidance for rooting out injustice and creating science learning spaces in which students feel valued safe and eager to engage In Growing and Sustaining Student Centered Science Classrooms David Stroupe promotes powerful conversation and action around knowledge building practices in science education The book takes readers into inspiring classroom communities in which all students are invited and encouraged to engage in the work of science An illuminating series of real time classroom scenes demonstrate flexible teaching approaches and instructional pivots that Stroupe calls talk moves and shows how they foster inclusive collaboration and participation to create a more expansive and better version of science education Even as Stroupe champions student centered science education he acknowledges that common obstructions to knowledge sharing or epistemic injustices can often prevent this student led ideal from materializing He calls attention to four types of injustices that frequently stifle student voice and access in science learning communities testimonial injustice hermeneutical injustice intrapersonal injustice and hierarchical injustice Recounting real life examples of these individual and systemic injustices Stroupe gives educators the tools to both identify and eradicate them This thought provoking book sets forth ambitious tactics for educators to audit assumptions and biases in science promote student agency and conduct action research to document change Using Stroupe s accessible methods teachers teacher educators and administrators can design immediate and long term instructional practices to disrupt injustices in STEM classroom communities and support student learning
