Design of DC - AC Inverter Using Microcontroller PIC Control Qais Hamid Jeflawi, 2015 This project aims to design single phase sine wave DC AC power inverter integrated with a microcontroller PIC16F877A simulated by using proteus software and implementation inverter circuit and discuss the result to output AC power quality an input DC power supply It involves generating of unipolar signals using programming to Programmable Interface Computer PIC and hex inverter Control on output to use them to modulate a 12V DC to 230V AC with stable frequency 50 Hz The focus is on designing inverter system is an inexpensive more stable high efficient system and smooth sine wave inverter because of the reliability of power company electricity service varies greatly due to many factors including the design of the power grid protective features power system maintenance practices and severe weather and availability of renewable energy sources The results of simulation were successful results of inversion

Single Phase Motor Speed Control Using SPWM Inverter Siti Fairuz Hamid, 2008 An inverter circuit by using Sinusoidal Pulse Width Modulation SPWM switching schemes is developed to control the speed of single phase AC motor and being verified experimentally Inverters are circuit that convert a DC source to an AC source DC is one type of energy found in batteries and AC is a type of energy that is produced by the power company and found in electrical homes offices appliances The application of this AC motor controller is to provide single phase ac induction motor less than 1.2 hp 372.85 W Semiconductor device Metal Oxide Field Effect Transistor MOSFET is used as switch in the full bridge H bridge inverter configuration with unipolar voltage switching A variable frequency output

waveform is produced by the inverter to run a motor at variable speeds that are directly proportional to this frequency. Besides the MOSFETs as the inverter driver for the MOSFET also very important in this circuit development because it is used to interface between control circuits low voltage part and inverter high voltage part. Another important part in this inverter design is PIC microcontroller chip that is used to provide the switching schemes to the MOSFETs. This microchip acts as a controller circuit that produces the carrier signal and modulating signal for the inverter. The objective of this project is to build an AC motor speed controller for household usage appliances to simulate and analyze the single phase SPWM operation of the inverter switching characteristics. The Programmable Interface Computer PIC used is PIC 18F4550 and the MOSFET driver used is IR2110. At the end of this project the SPWM output is developed from the controller circuit and applied to the driver circuit and the inverter and hence can be used to control the speed of the AC motor.

Principles of Inverter Circuits Burnice Doyle Bedford, Richard Gibson Hoft, 1985 **Inverter-Based Circuit Design Techniques for Low Supply Voltages** Rakesh Kumar Palani, Ramesh Harjani, 2017 *Pure Sine Wave Inverter*, 2012 **Design and Construction of a 2kva Pure Sine Wave Inverter** Aboyi Abe Barnabas, 2017-06-09 **Implementation of Unipolar PWM Technique on a Single-phase Inverter Using PIC Microcontroller** Khairil Anwar Mohd. Soror, 2007 **Microprocessor Controlled Pulse-width Modulated Sine-wave Inverter** Thye Heng Chin, 1984 **Implementation of Single Phase Full Bridge Unipolar Pwm Inverter Using Microcontroller PIC18F4331** Sezu Pathy Muthu Karippen, 2011 **Development of Hardware and Microprocessor Control Sine Wave Inverter** Chieng Kai Wong, 1984 **Sine-wave Inverter Design** Ah Chai Woo, 1978 **Microcontroller Based Variable Frequency Power Inverter** Khaled Ali Madi A. Ahmed, 2007. The variable frequency inverters have been used in wide applications such as speed control of induction motors. The variable speed operation of single phase and three phase induction motors suffer from large harmonic and limited speed range. Therefore intensive researches were carried out in order to eliminate the harmonic distortion simplify the motor speed control task over a wide range and to reduce the overall system cost. This work investigates performance of the microcontroller based variable frequency power inverter to reduce the Total Harmonic Distortion THD for the overall system. The fully controlled single phase and three phase bridge voltage source inverter have been designed and implemented with semiconductor power devices Insulated Gate Bipolar Transistor. The microcontroller has been employed in this inverter to provide SPWM signal that controls the applied voltage on the gate drive which provides the desired SPWM frequency at the output of the power inverter. The Matlab simulation results for the proposed system have been achieved with different SPWM frequencies. From the results a stable AC voltage with variable frequency over wide range has been obtained with fewer harmonics and a good agreement has been found between the simulation and hardware results of a single phase and three phase inverter. Also the result obtained has been compared with previous work and it shown a good agreement too. Therefore the system can be considered as variable frequency voltage source power inverter with low harmonic distortion THD.
