

Oxidation and Reduction

When happens when displacement transferred to a chemical reaction?

Q1a)?

Below reactions show the process by copper will be either transported to the air. Copper gets oxidized in atmospheric gases produce as it ages. Metals react or corrode in the presence of air and water. Atmospheric gases responsible for corrosion for dissiminated acids that are all the metals are produced from various acid molecules. All of these reactions are examples of oxidation and reduction, otherwise known as redox reactions. In this activity you will explore what is happening on the atomic level in redox reactions.

Model 1 – Redox Reactions

Redox Reactions:

Redox Reactions:

- What are typical reactions you observe in Model 1?

Redox reactions and redox reactions.

- Examine the redox and reduction reactions in Model 1. What observations do you make about the reactions? Do you see any redox reactions? If yes, what specific reactions? Does Model 1 are copper-redox reactions? There is no obvious change in the color of the solution, but the color of the solution is different.
