

POGIL Biology VII – Movement across biological membranes

The cell maintains a very precise balance of ions and organic molecules. To accomplish this, it is constantly transporting atoms and molecules across cellular membranes. This exercise explores our current model of the cell membrane and the ways that atoms and molecules can cross biological membranes. Today you will explore some of our conceptual models of these processes.

The Movement of Molecules Across Cell Membranes Wilfred D. Stein, 1967 *The Living Barrier* Roy J.

Levin, 2013-10-22 *The Living Barrier* A Primer on Transfer across Biological Membranes provides information pertinent to the movement of molecules across cell membranes. This book covers a variety of topics including cell membrane membrane transfer, water transfer, and movement of charged solutes. Organized into nine chapters, this book begins with an overview of the basic ideas of the cell membrane and reviews the experimental evidence about the structure of the cell membrane. This text then reviews the classical electron microscope pictures of membranes. Other chapters consider the interactions between electrical potentials and the movements of charged substances which make the membrane transfer of these substances much more complicated than those of neutral molecules. This book discusses as well the aspects of water structure and its influence on membrane permeability. The final chapter deals with the methods by which membranes are synthesized. This book is a valuable resource for biochemists, physiologists, pharmacologists, and botanists.

Transport And Diffusion Across Cell Membranes Wilfred Stein, 2012-12-02 *Transport and Diffusion across Cell Membranes* is a comprehensive treatment of the transport and diffusion of molecules and ions across cell membranes. This book shows that the same kinetic equations with appropriate modification can describe all the specialized membrane transport systems: the pores, the carriers, and the two classes of pumps. The kinetic formalism is developed step by step, and the features that make a system effective in carrying out its biological role are highlighted. This book is organized into six chapters and begins with an introduction to the structure and dynamics of cell membranes, followed by a discussion on how the membrane acts as a barrier to the transmembrane diffusion of molecules and ions. The following chapters focus on the role of the membrane's protein components in facilitating transmembrane diffusion of specific molecules and ions, measurements of diffusion through pores, and the kinetics of diffusion and the structure of such pores and their biological regulation. This book methodically introduces the reader to the carriers of cell membranes, the kinetics of facilitated diffusion, and cotransport systems. The primary active transport systems are considered, emphasizing the pumping of an ion: sodium, potassium, calcium, or proton, against its electrochemical gradient during the coupled progress of a chemical reaction, while a conformational change of the pump enzyme takes place. This book is of interest to advanced undergraduate students as well as to graduate students and researchers in biochemistry, physiology, pharmacology, and biophysics.

Transport across single biological membranes, 1979

Transport across biological membranes Milan Hoeser, 1981 *The Movement Of Molecules Across Cell Membranes* Wes Stein, 2012-12-02 *The Movement of Molecules across Cell Membranes* provides an understanding of the molecular basis of the movement of substances across the cell membrane by discussing the composition and structure of cell membranes. Comprised of nine chapters, the book starts by discussing the theory of irreversible thermodynamics to membrane transport, followed by a discussion of the Eyring analysis of diffusion. It then discusses the model for movement

into and across the cell membranes Other chapters focus on the existence of pores in the red cell membranes and the ion movement across the erythrocyte membranes The book s final chapter considers the four classifications of membrane based models which include the mobile carrier model the pore model and the two classes of enzyme models This book is intended for research students research workers biochemists biophysicists and physiologists Pharmacologists in the clinical field as well as research workers in agriculture will also find this book invaluable
