

# DNA Structure and Replication

How is genetic information stored and copied?

## Why?

Deoxyribonucleic acid or DNA is the molecule of heredity. It contains the genetic blueprint for life. For organisms to grow and repair damaged cells, each cell must be capable of accurately copying itself. So how does the structure of DNA allow it to copy itself so accurately?

## Model 1 – The Structure of DNA

1. Refer to the diagram in Model 1.
  - a. What are the three parts of a nucleotide?  
**Sugar, Phosphate, and Nitrogen Base**
  - b. What kind of sugar is found in a nucleotide?  
**deoxyribose**
  - c. Which nucleotide component contains nitrogen?  
**bases (a, t, c, g)**
  - d. Name the four nitrogen bases shown in Model 1.  
**Adenine (A) Thymine (T) Cytosine (C)**
2. DNA is often drawn in a "ladder model." Locate this drawing in Model 1.
  - a. Circle a single nucleotide on each side of the ladder model of DNA.

Given that certain conditions are met a single stranded DNA RNA ssDNA RNA structure called G quadruplex GQ can form in regions throughout the genome including at the telomeres and internal regions of the chromosomes These structures serve various functions depending on the region in which they form which include protecting the chromosome ends interfering with telomere elongation in cancer cells and regulating transcription and translation level gene expression Due to their high stability various cellular mechanisms such as GQ destabilizing proteins are employed to unfold these structures during DNA replication or repair Yet their distinct layered structure has made GQs an attractive drug target in cancer treatment as GQ stabilizing molecules could inhibit telomerase dependent telomere elongation a mechanism occurring in the majority of cancer cells to avoid senescence and apoptosis However proteins or small molecules interact with GQ that is under the influence of various cellular tension mechanisms including the tension applied by other nearby molecules or the tension due to DNA structure within the chromatin context Therefore it is important to characterize the stability of various GQs and their response to interacting molecules when subjected to a tensile force We employed a novel DNA based nano tension generator that utilizes the elastic properties of circularized short double stranded DNA dsDNA oligonucleotides to apply tension on the GQ Since this is a completely new approach the majority of this thesis was dedicated to proof of principle studies that demonstrated the feasibility and functionality of the method      **Sequence-dependent Information and Variation in DNA Structure** Richard Williams Wagner,1988      Understanding DNA Structure and Packing in Crystals Shun-Le Chen,1993

efficacy Encoding DNA The encoding of a unified complex that will enable both structure and immediate function of DNA originally synthesized through intermolecular coupling of pairs of pairs of hydrogen bonded steroid structured molecules Transmitting DNA The transmission of the encoded complex through the formation of a DNA double helix and steroid molecules which provide access to the information content contained within the double helix Decoding DNA The processes of decoding the double helix structure through the function capability provided by the steroid molecules including decoding tables of an interaction vessel formed by the steroid molecules comprising walls and ceiling Translating DNA The mapping of the nucleotide triplet to amino acid is shown through the analysis of the structural and chemical characteristics of the DNA double helix formed in conjunction with the steroid molecules thereby enabling a code of three nucleotides per amino acid Example An example is provided of constructing a protein chain of seven amino acids including the encoding transmission decoding and translation aspects Replication Replication of the double helix through the steroid molecules is shown along with error correction procedures Genetic rearrangement Methods of splicing and recombining the DNA structures to form increasingly complex structures This is intended for the individual who wants to know about the origins of life function DNA and the Genetic Codes As it contains original research it is not to be used for commercial purposes *The DNA Molecule* David Freifelder,1978 **DNA** Folke Tjerneld,1982 *The Structures of DNA* Juan A.
