Seibt,M. Nørskov,S. Schack Andersen,2016-10-14 Social robotics drives a technological revolution of possibly unprecedented disruptive potential both at the socio economic and the socio cultural level The rapid development of the robotics market calls for a concerted effort across a wide spectrum of academic disciplines to understand the transformative potential of human robot interaction This effort cannot succeed without the special expertise in the study of socio cultural interactions norms and values that humanities research provides This book contains the proceedings of the conference What Social Robots Can and Should Do Robophilosophy 2016 TRANSOR 2016 held in Aarhus Denmark in October 2016 The conference is the second event in the biennial Robophilosophy conference series this time combined with an event of the Research Network for Transdisciplinary Studies in Social Robotics TRANSOR Featuring 13 plenaries and 74 session and workshop talks the event turned out to be the world s largest conference in Humanities research in and on social robotics The book is divided into 3 sections Part I and Part III contain the abstracts of plenary lectures and contributions to 6 workshops Artificial Empathy Co Designing Children Robot Interaction Human Robot Joint Action Phronesis for Machine Ethics Robots in the Wild and Responsible Robotics Part II contains short papers for presentations in 7 thematically organized sessions methodological issues ethical tasks and implications emotions in human robot interactions education art and innovation artificial meaning and rationality social norms and robot sociality and perceptions of social robots The book will be of interest to researchers in philosophy anthropology sociology psychology linguistics cognitive science robotics computer science and art Since all contributions are prepared for an interdisciplinary readership they are highly accessible and will be of interest to policy makers and educators who wish to gauge the challenges and potentials of putting robots in society   *Envisioning Robots in Society – Power, Politics, and Public Space* M. Nørskov,J. Seibt,O.S. Quick,2021-01-04 The subject of social robotics has enormous projected economic significance However social robots not only present us with novel opportunities but also with novel risks that go far beyond safety issues It is a potentially highly disruptive technology which could negatively affect the most valuable parts of the fabric of human social interactions in irreparable ways Since engineering educations do not yet offer the necessary competences to analyze holistically assess and constructively mitigate these risks new alliances must be established between engineering and SSH disciplines with special emphasis on the humanities i e disciplines specializing in the analysis of socio cultural interactions and human experience The Robophilosophy Conference Series was established in 2014 with the purpose of creating a new forum and catalyzing the research discussion in this important area of applied humanities research with focus on robophilosophy Robophilosophy conferences have been the world s largest venues for humanities research in and on social robotics The book at hand presents the proceedings of Robophilosophy Conference 2020 Culturally Sustainable Social Robotics the fourth event in the international biennial Robophilosophy Conference Series which brought together close to 400 participants from 29 countries The speakers of the conference whose contributions are collected in this volume were invited to offer concrete proposals for how the Humanities can help to shape a future where social robotics is guided by the goals of enhancing socio cultural values rather than by utility alone The book is divided into 3 parts Abstracts of Plenaries which contains 6 plenary sessions Session Papers with 44 papers under 8 thematic categories and Workshops containing 25 items on 5 selected topics Providing concrete proposals from philosophers and other SSH researchers for new models and methods this book will be of interest to all those involved in developing artificial social agents in a culturally sustainable way that is also a fortiori ethically responsible **Sociality and Normativity for Robots** Raul Hakli,Johanna Seibt,2017-05-30 This volume offers eleven philosophical investigations into our future relations with social robots robots that are specially designed to engage and connect with human beings The contributors present cutting edge research that examines whether and on which terms robots can become members of human societies Can our relations to robots be said to be social Can robots enter into normative relationships with human beings How will human social

relations change when we interact with robots at work and at home The authors of this volume explore these questions from the perspective of philosophy cognitive science psychology and robotics The first three chapters offer a taxonomy for the classification of simulated social interactions investigate whether human social interactions with robots can be genuine and discuss the significance of social relations for the formation of human individuality Subsequent chapters clarify whether robots could be said to actually follow social norms whether they could live up to the social meaning of care in caregiving professions and how we will need to program robots so that they can negotiate the conventions of human social space and collaborate with humans Can we perform joint actions with robots where both sides need to honour commitments and how will such new commitments and practices change our regional cultures The authors connect research in social robotics and empirical studies in Human Robot Interaction to recent debates in social ontology social cognition as well as ethics and philosophy of technology The book is a response to the challenge that social robotics presents for our traditional conceptions of social interaction which presuppose such essential capacities as consciousness intentionality agency and normative understanding The authors develop insightful answers along new interdisciplinary pathways in robophilosophy a new research area that will help us to shape the robot revolution the distinctive technological change of the beginning 21st century **Before Humanity** Stefan Herbrechter,2021-12-13 Before Humanity takes up the question of the post in the posthuman from the position of ancestrality Speculating about who or what comes after the human inevitably throws us back to our very beginnings The before in Before Humanity in this context takes on two meanings 1 what happened before we apparently became human which translates into a critical reading of paleo anthropology as well as evolutionary narratives of hominization 2 living through the end of a certain humanist anthropocentric notion of humanity what tasks lie before us which provokes a critical reading of the Anthropocene and current narratives of geologization In other words Before Humanity investigates conceptualizations of humanity and asks whether we have ever been human and if not what could or maybe what should we have been **Should Robots Have Standing? The Moral and Legal Status of Social Robots** Anne Gerdes,Mark Coeckelbergh,David Gunkel,2022-07-07 *Artificial Intelligence: Robot Law, Policy and Ethics* Nathalie Rébé,2021-08-09 In Artificial Intelligence Robot Law Policy and Ethics Dr Nathalie R b discusses the legal and contemporary issues in relation to creating conscious robots She argues that AI s physical and decision making capacities to act on its own means having to grant it a juridical personality The advancement in new technologies forces us to reconsider the role Artificial Intelligence AI will have in our society Sectors such as education transportation jobs sex business the military medical and security will be particularly affected by the development of AI This work provides an analysis of cases and existing regulatory tools which could be used by lawyers in future trials Dr R b also offers a new comprehensive framework to regulate Strong AI so that it can safely live among humans This book is a response to two questions first should we ban or prohibit AI and secondly if not what should be the salient features of a legal or regulatory framework for AI

Neuroprosthetic Supersystems Architecture Matthew E. Gladden,2017-05-13 This volume serves a resource for the design and analysis of neuroprosthetic supersystems which can be defined as organizations either small or large simple or complex whose human members have been neuroprosthetically augmented While numerous other texts focus on the biomedical engineering of neuroprostheses as technological devices or on the biocybernetic engineering of the host device system comprising a neuroprosthesis and its human host this volume presents a unique investigation of the intentional creation of higher order supersystems that allow multiple neuroprosthetically augmented human beings to interact with one another and with external information systems in order to accomplish some shared task In essence this can be understood as the work of designing and managing neuroprosthetically enhanced organizations Individual chapters present an ontology of the neuroprosthesis as a computing device a biocybernetic ontology of the host device system an ontology of the neuroprosthesis as an instrument of cyborgization motivating and inhibiting factors for the organizational deployment of posthumanizing neuroprostheses by military organizations and other early adopters an introduction to enterprise architecture in the context of technological posthumanization an exploration of the implications of neuroprosthetic augmentation for enterprise architecture and considerations for the development of effective network topologies for neuroprosthetically augmented organizations The conceptual frameworks formulated within this book offer a wide range of tools that can be of use to policymakers ethicists neuroprosthetic device manufacturers organizational decision makers and others who must analyze or manage the complex legal ethical and managerial implications that result from the use of emerging neuroprosthetic technologies within an organizational context *Spirituality Management in the Workplace* Fahri Özsungur,Fevziye Bekar,2023-12-14 The experts here provide conceptual frameworks and guidance by examining the subject in the light of current developments at multiple levels of analysis individual organizational cultural and in leadership Spirituality in the workplace considers employees as a whole in spirit body and mind *Posthuman Management* Matthew E. making to spatially diffuse robots that have no discernible physical form quantitative approaches to comparing managerial capabilities of human and artificial agents the creation of artificial life forms that function as autonomous enterprises competing against human businesses neural implants as gateways that allow human users to participate in new forms of organizational life and the implications of advanced neuroprosthetics for information security and business model design As the first comprehensive application of posthumanist methodologies to management this volume will interest management scholars and management practitioners who must understand and guide the forces of technologization that are rapidly reshaping organizations form dynamics and societal roles **Human Aspects of IT for the Aged Population.
