

WELDING DESIGN

1. Stresses in welded joints

The stresses in welds can be categorised as to the kind and direction of the actions and the type of weld:

Table 1: Stresses in welds

σ_v	Axial stresses in longitudinal direction of the weld 	σ_v is of minor importance in supporting components and is not taken into consideration in the case of steel structures with permanent load.
σ_L	Axial stresses transverse to the longitudinal direction of the weld 	Important stress for the calculation of butt welded components
		
τ_v	Shear stresses in longitudinal direction of the weld 	Important stress in fillet welds (neck lap and side lap welds and shear connections) during stressing of the weld in longitudinal direction with shear forces.
τ_L	Shear stresses transverse to the longitudinal direction of the weld 	Stress occurring rarely in steel structures.
