Eric Vandendriessche,2015-01-02 This book addresses the mathematical rationality contained in the making of string figures It does so by using interdisciplinary methods borrowed from anthropology mathematics history and philosophy of mathematics The practice of string figure making has long been carried out in many societies and particularly in those of oral tradition It consists in applying a succession of operations to a string knotted into a loop mostly using the fingers and sometimes the feet the wrists or the mouth This succession of operations is intended to generate a final figure The book explores different modes of conceptualization of the practice of string figure making and analyses various source material through these conceptual tools it looks at research by mathematicians as well as ethnographical publications and personal fieldwork findings in the Chaco Paraguay and in the Trobriand Islands Papua New Guinea which all give evidence of the rationality that underlies this activity It concludes that the creation of string figures may be seen as the result of intellectual processes involving the elaboration of algorithms and concepts such as operation sub procedure iteration and transformation **Reviving Ancient Chinese Mathematics** Jiri Hudecek,2014-07-25 Twentieth century China has been caught between a desire to increase its wealth and power in line with other advanced nations which by implication means copying their institutions practices and values whilst simultaneously seeking to preserve China s independence and historically formed identity Over time Chinese philosophers writers artists and politicians have all sought to reconcile these goals and this book shows how this search for a Chinese way penetrated even the most central least contested area of modernity science Reviving Ancient Chinese Mathematics is a study of the life of one of modern China s most admired scientific figures the mathematician Wu Wen Tsun Negotiating the conflict between progress and tradition he found a path that not only ensured his political and personal survival but which also brought him

renown as a mathematician of international status who claimed that he stood outside the dominant western tradition of mathematics Wu Wen Tsun's story highlights crucial developments and contradictions in twentieth century China the significance of which extends far beyond the field of mathematics On one hand lies the appeal of radical scientific modernity mechanisation in all its forms and competitiveness within the international scientific community On the other is an anxiety to preserve national traditions and make them part of the modernisation project Moreover Wu's intellectual development also reflects the complex relationship between science and Maoist ideology because his turn to history was powered by his internalisation of certain aspects of Maoist ideology including its utilitarian philosophy of science This book traces how Wu managed to combine political success and international scientific eminence a story that has wider implications for a new century of increasing Chinese activity in the sciences As such it will be of great interest to students and scholars of Chinese history the history of science and the history and philosophy of mathematics Mathematical Cultures Brendan

Larvor, 2016-05-25 This collection presents significant contributions from an international network project on mathematical cultures including essays from leading scholars in the history and philosophy of mathematics and mathematics education Mathematics has universal standards of validity Nevertheless there are local styles in mathematical research and teaching and great variation in the place of mathematics in the larger cultures that mathematical practitioners belong to The reflections on mathematical cultures collected in this book are of interest to mathematicians philosophers historians sociologists cognitive scientists and mathematics educators **Mathematics in Victorian Britain** Raymond Flood, Adrian
