years mostly because of its great dynamic remodeling capacity during events of plasticity e.g. learning the axonal domain has somehow remained in the background despite the fact that especially recent comprehensive studies from various fields of research underline the axon's contribution to dynamic plasticity processes. Consequently, this Research Topic focuses on the many exciting aspects of axonal neurobiology ranging from membrane composition and molecular determination during development to axonal domain specialization and physiology in health and disease.

In Chapter 1, Axons in the PNS, Bombeiro et al. use immunodeficient mice to study the role of lymphocytes during the regeneration of peripheral nerves, showing that the modulation of immune responses after injury can be an efficient approach to enhance nerve regeneration in the PNS. Using a DRG model, Berbusse et al. identify the onset of damage to mitochondrial structure and dynamics as a key event during early axon degeneration and provide evidence that *Nmnat1*, a member of the family of nicotinamide nucleotide adenyltransferases, can have protective effects by preserving normal mitochondrial integrity and dynamics. In another study of PNS nerve regeneration, Law et al. use proteomics approaches via Mass Spectrometry to provide evidence that rosovitine, a synthetic purine nucleoside analog, can successfully promote PNS axon regeneration.

In Chapter 2, Axonal development in the central nervous system, Yoshimura et al. analyze specialized axonal domains, namely the axon initial segment and nodes of Ranvier, with regards to their expression profiles of the major scaffolding protein IV spectrin. Super-resolution microscopy reveals a potential developmental switch of spectrin isoforms at both axonal domains. In a related study also using super-resolution microscopy, Leterrier et al. examine a potential reciprocal role of membrane partners in ankyrin G targeting and stabilization at the axonal membrane during development. The authors demonstrate a tight and precocious association of ankyrin G with its membrane partners. Hfflin et al. address the question of axon initial segment morphology across different cell classes in cortical organotypic slice cultures and find a surprising heterogeneity, especially between pyramidal cells and interneurons in primary visual cortex. In a major step towards establishing a successful live label of the axon initial segment, Dumitrescu et al. report the development of a genetically encoded construct consisting of a voltage-gated sodium channel intracellular domain fused to yellow fluorescent protein (YFP-Nav1.3-N1). Nelson and Jenkins then provide a comprehensive Review article on the axon initial segment and nodes of Ranvier with a special focus on the various scaffolding protein isoforms and their role in human disease.

In Chapter 3, Axonal physiology and plasticity, Nikitin et al. investigate fast onset dynamics of action potentials during neuronal development in vitro, showing that encoding of high frequencies improves upon culture maturation, accompanied by the development of passive electrophysiological properties and action potential generation. Using pharmacological and RNA interference approaches, Tapia et al. provide evidence that cannabinoid receptors and their ligands can modulate dendritic morphology and thus indirectly also affect ankyrin G accumulation at the axon initial segment. A Mini Review by Zbili et al. discusses the potential impact of subthreshold changes in presynaptic membrane potential before action potential initiation on neurotransmitter release and which significant impact such mechanisms could

have on information processing in neuronal circuits Yamada and Kuba close this chapter with a Mini Review on axon initial segment plasticity with a particular focus on ion channels and the biophysics of excitability In Chapter 4 Axon degeneration and regeneration Hamada et al investigate the often overlooked question to which extent myelin loss affects action potential propagation along distal branch points and axon collaterals Using the cuprizone demyelination model and optical voltage sensitive dye imaging the authors uncover functional consequences of demyelination that reach well beyond the main axon In a model of mild traumatic brain injury Vascak et al demonstrate complex aspects of this injury type on neocortical circuit function including changes in inhibitory perisomatic input and axon initial segment driven output in affected layer V neurons In a Mini Review Grosch et al discuss recent advances in the field of Parkinson s disease with a focus on early degeneration in dopaminergic and serotonergic neurons of the basal ganglia The last two articles cover the topic of axonal regeneration Li et al investigate the role of activated astrocytes in spinal cord lesion and how their functional downregulation via an inhibitor of mitochondrial fission Mdivi 1 could potentially have positive impact on lesion scar formation and axonal regeneration In a final Review Liu et al highlight recent advances in the development of biomaterial scaffolds and cell transplantation strategies to combine two promising therapeutic approaches for spinal cord injury

Chemopreventive Activities of Phytochemicals Toshio Morikawa,2020-12-15 Inflammation is caused by a variety of stimuli including physical damage UV irradiation microbial invasion and immune reactions The classical key features of inflammation are redness warmth swelling and pain and their cascades can lead to the inflammatory bowel disease and psoriasis Many inflammatory diseases are becoming common among the elderly worldwide Clinically used anti inflammatory drugs suffer from the disadvantages of side effects and high treatment costs in the case of biologics Therefore research on new anti inflammatory molecules and the elucidation of their molecular mechanisms are being actively conducted This Special Issue on Chemopreventive Activities of Phytochemicals is intended to offer anti inflammatory active natural products as candidates and or leads for pharmaceuticals The research fields of this Special Issue include natural products chemistry phytochemistry pharmacognosy food chemistry bioorganic synthetic chemistry chemical biology molecular biology molecular pharmacology and other related research fields

Relevance of Steroid Biosynthesis, Metabolism and Transport in Pathophysiology and Drug Discovery Tea Lanišnik Rižner,Walter Jäger,Csilla Özvegy-Laczka,2019-07-10 Steroid hormones have important roles in human physiology but they are also implicated in the development of hormone dependent cancers and various non malignant diseases Furthermore changes in the concentrations of steroid hormones have important effects on the homeostasis of pre and post menopausal women as well as of men in andropause The associations of steroid hormones with pathophysiological processes and the altered mechanisms of their actions in disease are still not completely understood It has been known for more than thirty years that in addition to their endocrine activity steroid hormones act in an intracrine manner In target organs active

androgens and estrogens can be formed from inactive or less active precursor steroid hormones mainly dehydroepiandrosterone sulfate DHEA S and estrone sulfate E1 S after their translocation into cells through the transporter proteins of the organic anion transporting polypeptide OATP and organic anion transporter OAT families The combination of altered uptake of precursors changed activation and action of estrogens and androgens in concert with the changes in the metabolism and excretion may thus have major roles in the development of hormone dependent malignant and non malignant diseases To date the salient roles of the individual players in disease pathophysiology have not been precisely defined The aim of this Research Topic is thus to highlight the progress made in the field of steroid transport and intracrine actions and metabolism with special emphasis on the involvement of these processes in the pathophysiology of hormone dependent disorders and on the identification of novel drug targets
