

POGIL: Lewis Dot Structures Part 1 (20 P)

How are electrons shared to create covalently bonded molecules?

Read This!

Why? Covalent bonds result from a *sharing* of electrons by two or more atoms (usually nonmetals). Lewis theory (Gilbert Newton Lewis, 1875-1946) focuses on the valence electrons, since the outermost electrons are the ones that are highest in energy and farthest from the nucleus, and are therefore the ones that are most exposed to other atoms when bonds form. Lewis dot diagrams for elements are a handy way of picturing valence electrons, and especially, which electrons are available to be shared in covalent bonds.
