

PHYSICAL KINETIC MOLECULAR THEORY

Learning Objectives

- to identify theoretical differences in how heat conduction occurs in different types of materials and to understand the relationship of the kinetic molecular theory to specific heat capacity and thermal conductivity
- to represent quantitative values for specific heat capacity and thermal conductivity

Module 1: Representation of states in different phases

The following figure illustrates representative particle behaviour in different states of matter.

Figure 1: Representative particle behaviour in different states of matter

Students may struggle to represent qualitative differences between these states. Encourage representation with clear and visible movement.

Key Concepts

- Effect of the type of representation of states and transitions on given theories, and explain the effect of theory on the representation of particle behaviour and physical properties (see Table 1). Encourage skills related to drawing the particle of particle movement using a better or not the particles and not the container.
