How do light-dependent and light-independent reactions provide food for a plant?

Why?

Plants are the original solar panels. Through photosynthesis a plant is able to convert electromagnetic (light) energy into chemical energy. This energy is used not only to keep the plant alive, but also to sustain all creatures that rely on the plant for food and shelter. Plants and photosynthetic algae are also the source of all oxygen on Earth, allowing the inhabitants of Earth to benefit from our most plentiful renewable energy resource.

Photosynthesis Catalyst of Life Marvin Ira Miller, 2016-09-29 Photosynthesis Catalyst of Life By Marvin Ira Miller When L E D came on the market author Marvin Ira Miller was involved with indoor operations dealing with producing medical plants Quickly it became apparent to apply them properly He had to have an understanding of what light is and what photosynthesis is After a month of research it seemed nobody seemed to know and as for light it all depends on who you talk to Science has branched off so many directions Their language has gotten to the point that if you ask a physicist a chemist and a biologist to describe how to boil a cup of water they will all end up with a 20 page formula filled with hundred dollar words They will pass their paper to the right and they all sit there quietly pretending like they knew what the other scientist was saying Then you walk in and grab a cup fill it with water throw it in the microwave for a minute and turn to see them glaring at you It's no wonder with photosynthesis you have to have an understanding of a number of different fields and how they fit together Miller's background is more in engineering If there was a room filled with equipment where you put this in here that comes out there he was the one they called when everyone else was scared to go in As with everything else complicated in life break it down to its simplest components and it becomes easy when you never use the word can't This book is meant to pass on what Miller discovered and tell it in a way the guy who put the cup in the microwave could understand The goals are simple First is to leave you with a comprehension of light since there are many other areas its properties can be applied Second is to give you the knowledge of what photosynthesis is and use words the rest of us people without all the big words understand Once you have an understanding of these two things by the end of the book you will start to understand the true value of L E D systems besides power savings By knowing desired outcomes and chemical makeup you will see the ability to alter the chemical direction for things such as color taste smell or pharmaceutical direction just by adding or subtracting different frequency combinations And finally when a light salesman comes up to you and says for five dollars more you can get this lamp because it has 50 more lux you can look at him laughing and say what does that have to do with growing plants Marvin Ira Miller hates sales people
