

Acids and Bases

How do acids and bases behave in water?

Why?

Acids and bases play an important role in our lives. Numerous biological processes, industrial applications, and even environmental problems are a function of the acidity or basicity (alkalinity) of aqueous solutions. It is therefore important to understand what makes a substance behave as an acid or a base when dissolved in water. In this activity, we will explore the physical and chemical properties of acids and bases.

Model 1 – Arrhenius Acids and Bases

pKa Prediction for Organic Acids and Bases D. Perrin, 2012-11-27 Many chemists and biochemists require to know

the ionization constants of organic acids and bases This is evident from the Science Citation Index which lists The Determination of Ionization Constants by A Albert and E P Serjeant 1971 as one of the most widely quoted books in the chemical literature Although ultimately there is no satisfactory alternative to experimental measurement it is not always convenient or practicable to make the necessary measurements and calculations Moreover the massive pK compilations currently available provide values for only a small fraction of known or possible acids or bases For example the compilations listed in Section 1.3 give pK data for some 6 000-8 000 acids whereas if the conservative estimate is made that there are one hundred different substituent groups available to substitute in the benzene ring of benzoic acid approximately five million trisubstituted benzoic acids are theoretically possible Thus we have long felt that it is useful to consider methods by which a pK value might be predicted as an interim value to within several tenths of a pH unit using arguments based on linear free energy relationships by analogy by extrapolation by interpolation from existing data or in some other way This degree of precision may be adequate for many purposes such as the recording of spectra of pure species as anion neutral molecule or cation for selection of conditions favourable to solvent extraction and for the interpretation of pH profiles for organic reactions
