achieve our understanding of protein DNA interactions First the topic will bring together a lot of very active research in the study of gene replication gene regulation the strategies We therefore want to acquire an in depth knowledge of some of the mechanisms of gene regulation gene transfer and gene replication Further the readers of the papers will realize the importance of the topic and will learn the most recent thinking results and approaches in the area We are fully confident that we have exceeded our expectations Now we are proud to present the final output of the topic which is the eBook It includes 24 articles contributed by 118 authors As of today March 16th January 2017 the total number of readings has reached 19 284 14 921 article views and 2 944 article downloads *Control of Gene Expression* Mauro Carneiro,1985 **Translational**

Control of Gene Expression in Response to DNA-damaging Agents Lucy A. Young,2011 In response to DNA damage cells initiate a complex DNA damage response DDR that includes mechanisms of DNA repair cell cycle arrest or in the cases of irreparable damage apoptosis Although regulation of the DDR has been extensively studied at the level of post translational modifications and transcription less is known about the role played by translational regulation The data presented in this study describes the translational response and genome wide translational profiles of human cells exposed to the DNA damaging agents ethyl methanesulphonate EMS and ionising radiation IR Exposure of HeLa cells to EMS caused a 60% decrease in global protein synthesis mediated by phosphorylation of the a subunit of eukaryotic initiation factor 2 eIF2 whereas IR modulated global protein synthesis through changes in 4E BP phosphorylation Polysome profiling by cDNA micro array was used to identify on a genome wide scale the differential translation of mRNAs following exposure to EMS or IR Functional analysis of the data revealed translational regulation of distinct subsets of genes that in the most part were unique to EMS or IR exposure An enrichment of genes involved in the ER stress response was identified following exposure to EMS whereas genes involved in the mitochondrial oxidative phosphorylation pathway and ubiquitin proteasome pathway were identified following exposure to IR These data suggest that translation of distinct subsets of mRNAs may be necessary to initiate appropriate stress responses following exposure to different types of DNA damaging agents and in agreement with previous studies powley et al 2009 implicates translational control as an important mechanism of the DRR *Translational Control of Gene Expression* ,1966 GENE REGULATION C.B.
