

## Cells: Membrane Structures and their Functions

### Controlled Substances

#### Why?

You are cramming for finals. Your notes from all of your classes are spread throughout your room, car and backpack. You look at your schedule of exams and find that your Biology test is tomorrow. You then begin the process of organizing your books, notes, and other information, separating them by subject and accumulating them so that your studying is more efficient. A plasma membrane acts as an organizer in cells, compartmentalizing internal structures. The cell membrane acts as a boundary between the cell and the external environment.

#### Model 1

1. In what part of the cell is the cell membrane located?

The outer part

2. On the enlargement in Model 1, label the inside and outside of the cell.

The inside of the cell would be located above the upper phosphate head.

3. In Model 1, what biomolecules compose the cell membrane?

Proteins, lipids, phospholipids

4. How many layers of phospholipids compose the membrane?

2

5. The proteins are labeled with letters. How many proteins are in Model 1?

3

6. Do all of the proteins in Model 1 touch the inside and the outside of the cell (membrane spanning)?

No. One of the proteins touches only one or the other. This is called the peripheral protein.

7. Label on the diagram which areas of each of the membrane components in Model 1 would be polar and nonpolar.

The inside of the membrane is nonpolar while the outside is polar.

**Intracellular Transport** Katherine Brehme Warren, 2014-05-12 Intracellular Transport is a collection of papers that examines the processes of and the mechanisms underlying intracellular transport One paper describes that all active transport processes in the amoeba are intracellular and depend on dynamic transformations of membrane into cytoplasm and of cytoplasm into membrane Another paper discusses the kinetics of membrane transport of which the phenomena of counterflow can become a mobile carrier system The paper notes that the specific transport properties of membranes are conferred by the proteins of the surfaces that are grouped as macromolecular complexes probably similar to those of enzymes One paper describes the concept of parametric pumping an oscillation driven separation process as a possible model for active transport in biological cells Another paper compares the fine scale diffusion effects that happen in a mixture without large scale concentration gradients and where the effect are on a large scale The homogenous kinetic law can be used in the large scale situation the law already can account for any of the fine scale diffusion effects The paper notes that without large scale concentration gradients the transport event is from a local region to a nearby reaction site only Where the effects are on a large scale the diffusion results in a gross transport of over distances larger than molecular dimensions This collection can prove useful for mathematicians cellular biologists physical chemists physiologists electron microscopists geneticists and engineers

**Intracellular transport** Katherine Brehme Warren, 1969 Transport Phenomena in Biological Systems George A. Truskey, Fan Yuan, David F.
