

14. Provide the chemical formula for each of the following ionic compounds.

Barium chloride $\text{Ba}^{+2} \text{Cl}^{-1} \rightarrow \text{BaCl}_2$ Magnesium oxide $\text{Mg}^{+2} \text{O}^{-2} \rightarrow \text{MgO}$

15. Consider the two chemical formulas you wrote in Question 3 for compounds of iron and sulfur. Would the name "iron sulfide" be sufficient to uniquely identify either of those compounds? Explain.

"iron sulfide" is not sufficient because there are two different forms of iron (Fe^{+2} and Fe^{+3}). The name does not indicate which iron is in the compound.

Read This!

When the metal in an ionic compound always forms an ion with the same charge, you need not indicate that charge as part of the compound name. However, some atoms have the ability to form more than one type of ion. This can make naming confusing. You can't simply refer to a compound of copper and oxygen as "copper oxide." People won't know which compound you are referring to— CuO or Cu_2O .

Model 3 – Ionic Compound Names (Metals that form multiple ions)

Cu_2O	Copper(I) oxide	PbO	Lead(II) oxide
CuO	Copper(II) oxide	PbO_2	Lead(IV) oxide
SnF_2	Tin(II) fluoride	FeCl_2	Iron(II) chloride
SnF_4	Tin(IV) fluoride	FeCl_3	Iron(III) chloride

16. Model 3 is labeled "Metals that form multiple ions." What other metals that form multiple ions could be included in Model 3? Model 1 may be helpful in this regard.

Mercury (Hg_2^{+2} and Hg^{+2}) and nickel (Ni^{+2} and Ni^{+3})

17. Describe the most obvious difference between the names in Model 3 and those in Model 2.

Roman numerals are used in Model 3 and not in Model 2.

18. Do the Roman numerals in the names in Model 3 relate to the number of cations or number of anions in the formula unit? Support your answer by citing two specific examples.

The Roman numerals have no connection between the number of cations or anions in the compound. An example is Lead (II) oxide. There is only one lead (Pb) ion in the compound and not four.

19. Keeping in mind that the sum of the charges in an ionic compound must equal zero, use the chemical formulas in Model 3 to answer the following questions:

- a. Identify the charge on the copper cations in copper(I) oxide and copper(II) oxide, respectively.

$\text{Cu}_2^+ \text{O}^{-2}$ (Each copper I must be 1^+) || $\text{Cu}^{+2} \text{O}^{-2}$ (Each copper II must be 2^+)

- b. Identify the charge on the iron cations in iron(II) chloride and iron(III) chloride, respectively.

$\text{Fe}^{+2} \text{Cl}_2^{-1}$ (Fe^{+2}) || $\text{Fe}^{+3} \text{Cl}_3^{-1}$ (Fe^{+3})

20. What do the Roman numerals in the compounds described in Question 19 indicate?

The Roman numerals indicate the charge of the ion.
(II $\rightarrow 2^+$, III $\rightarrow 3^+$)

Chemical Equilibrium and Solutions James E. Banks, 1967 **Chemical Equilibrium** Allen J. Bard, 1966 **Chemical Equilibrium** William Guenther, 1975-12 The present work is designed to provide a practical introduction to aqueous equilibrium phenomena for both students and research workers in chemistry biochemistry geochemistry and interdisciplinary environmental fields The pedagogical strategy I have adopted makes heavy use of detailed examples of problem solving from real cases arising both in laboratory research and in the study of systems occurring in nature The procedure starts with mathematically complete equations that will provide valid solutions of equilibrium problems instead of the traditional approach through approximate concentrations and idealized infinite dilution assumptions There is repeated emphasis on the use of corrected conditional equilibrium constants and on the checking of numerical results by substitution in complete equations and or against graphs of species distributions Graphical methods of calculation and display are used extensively because of their value in clarifying equilibria and in leading one quickly to valid numerical approximations The coverage of solution equilibrium phenomena is not however exhaustively comprehensive Rather I have chosen to offer fundamental and rigorous examinations of homogeneous step equilibria and their interactions with solubility and redox equilibria Many examples are worked out in detail to demonstrate the use of equilibrium calculations and diagrams in various fields of investigation **Equilibrium**, 1991 **Equilibrium Calculations** John T.
