### **Exam 2023**

How many different types of molecules are shown in Model 1? - ANSWER two: circle and triangle

Number of triangles and circles on each side of membrane? - ANSWER 14 triangles on left: 0 triangles on right

12 circles on left: 13 circles on right

Which shape is larger? - ANSWER triangle

Describe direction of movement of molecules in Model 1. - ANSWER Random-all directions

Which molecules are able to pass through the semi-permeable membrane? - ANSWER Circles can fit through the gaps due to small size and are nearly equally distributed on both sides of the membrane.

Would you expect the Model 1 system to change over time? - ANSWER No. The triangles will remain on the left side because they are too big to pass through membrane. Circles will remain evenly distributed on both sides due to size and random movement.

What two major types of biological molecules compose the majority of the cell membrane in Model 2? - ANSWER Phospholipids and membrane spanning proteins.

How many different protein molecules are found in Model 2? - ANSWER Four. Two small surface proteins and 2 membrane spanning proteins.

What is the difference between the position of the surface proteins and the membrane-spanning proteins? - ANSWER Surface proteins do not span the cell membrane.

When a carbohydrate chain is attached to a protein, what is the structure called? - ANSWER Glycoprotein; glyco = carbohydrate

When a carbohydrate is attached to a phospholipid, what is the structure called? - ANSWER Glycolipid

 Biology Volume 1 Concepts of Membrane Structure covers membrane properties influenced by alterations in membrane lipid  
 compositions and or other organizational parameters that are encompassed by the term fluidity This book is composed of  
 eight chapters that discuss significance of fluidity changes in both normal and pathological cellular functions This book starts  
 by describing membrane structural organization and composition and arrangement of the molecular components of cell  
 membranes This is followed by discussions on structural properties of lipids and role of nonbilayer lipid structures in  
 membrane fusion The methodological approaches in study of cellular membrane structural diversity and fluid mosaic model  
 for accurate representation of membrane fluidity are also discussed This volume then describes the phenomenon of reversed  
 or negative membrane images as viewed with transmission electron microscope Chapters 6 and 7 explain the interaction of  
 cytochrome P 450 with phospholipids and proteins in the endoplasmic reticulum and steps in the derivation of membrane  
 structure and packing principles Finally the concluding chapter focuses on the membrane of the human red blood cell and  
 presents relatively simple arguments concerning its physical properties The book will serve as a primary source for research
