Polar Bluetooth Manual:

Polar Remote Sensing Dan Lubin, Robert Massom, 2006-08-31 The polar regions perhaps more than any other places on Earth give the geophysical scientist a sense of exploration This sensibility is genuine for not only is high latitude fieldwork arduous with many locations seldom or never visited but there remains much fundamental knowledge yet to be discovered about how the polar regions interact with the global climate system The range of opportunities for new discovery becomes strikingly clear when we realize that the high latitudes are not one region but are really two vastly different worlds The high Arctic is a frozen ocean surrounded by land and is home to fragile ecosystems and unique modes of human habitation The Antarctic is a frozen continent without regular human habitation covered by ice sheets taller than many mountain ranges and surrounded by the Earth's most forbidding ocean When we consider global change as applied to the Arctic we discuss impacts to a region whose surface and lower atmospheric temperatures are near the triple point of water throughout much of the year The most consistent signatures of climate warming have occurred at northern high latitudes IPCC 2001 and the potential impacts of a few degrees increase in surface temperature include a reduction in sea ice extent a positive feedback to climate warming due to lowering of surface albedo and changes to surface runoff that might affect the Arctic Ocean's salinity and circulation

Polar Bears

IUCN/SSC Polar Bear Specialist Group. Working Meeting, 2002 These proceedings provide an overview of the ongoing research and management activities on polar bears in the circumpolar arctic Together with the previous 12 proceedings they provide an historic record of international efforts in protecting polar bears from over harvest and document more recent concerns of threats arising from increased human activities in both the Arctic and in regions far beyond the realm of polar bears More proactive management is needed to address limitations in the knowledge of population dynamics New information indicates that the greatest future challenges to polar bear conservation may be ecological change in the Arctic due to climate change and pollution The complex global nature of the issues requires international cooperation and development of diverse new approaches to address them
