Housh, Joel T. Cramer, Joseph P. Weir, Travis W. Beck, Glen O. Johnson, 2017-06-30 This lab manual is designed to benefit those colleges and universities that offer courses with lab components in physical fitness exercise physiology and healthy lifestyles but do not have the facilities and or budget to allow students to train in high tech laboratory settings This long overdue book essential for sports and exercise science departments on a budget provides meaningful lab experiences that don't require sophisticated and expensive equipment The labs were written and designed to be self administered or administered to others Readers will find the book an essential resource for any career involving physical fitness and performance testing This book's clear and concise layout makes it an ideal tool both for learning and for practical application in professional settings The book includes 31 labs divided into eight units Introductory labs Aerobic fitness Fatigue thresholds Muscular strength Muscular endurance Muscular power Body composition and body build Flexibility Labs include these features Background Terms and Abbreviations Equipment and pricing Procedures Equations Sample Calculations Worksheets Tables Extension Activities and References The manual also includes a table of units and conversions a list of equipment and vendors a Glossary and an Index

Neural Circuitry of Behavioral Flexibility: Dopamine and Related Systems Gregory B. Bissonette, Matthew R. Roesch, 2016-03-22 Decades of research have identified a role for dopamine neurotransmission in prefrontal cortical function and flexible cognition Abnormal dopamine neurotransmission underlies many cases of cognitive dysfunction New techniques using optogenetics have allowed for ever more precise functional segregation of areas within the prefrontal cortex which underlie separate cognitive functions Learning theory predictions have provided a very useful framework for interpreting the neural activity of dopamine neurons yet even dopamine neurons present a range of responses from salience to prediction error signaling The functions of areas like the Lateral Habenula have been recently described and its role presumed to be substantial is largely unknown Many other neural systems interact with the dopamine system like cortical GABAergic interneurons making it critical to understand those systems and their interactions with dopamine in order to fully appreciate dopamine's role in flexible behavior Advances in human clinical research like exome sequencing are driving experimental hypotheses which will lead to fruitful new research directions but how do or should these clinical findings inform basic research Following new information from these techniques we may begin to develop a fresh understanding of human disease states which will inform novel treatment possibilities However we need an operational framework with which to interpret these new findings Therefore the purpose of this Research Topic is to integrate what we know of dopamine the prefrontal cortex and flexible behavior into a clear framework which will illuminate clear testable directions for future research
