Renowned author team Nell Dale and Chip Weems are careful to include all topics and guidelines put forth by the ACM IEEE to make this text ideal for the one or two term CS1 course. Their philosophy centers on making the difficult concepts of computer science programming accessible to all students while maintaining the breadth of detail and topics covered. Key Features: The coverage of advanced object oriented design and data structures has been moved to later in the text. Provides the highly successful concise and student friendly writing style that is a trademark for the Dale Weems textbook series in computer science. Java Nell B. Dale, Chip Weems, 2008 Extensively revised the new Second Edition of Programming and Problem Solving with Java continues to be the most student friendly text available. The authors carefully broke the text into smaller more manageable pieces by reorganizing chapters allowing student to focus more sharply on the important information at hand. Using Dale and Weems' highly effective progressive objects approach, students begin with very simple yet useful class design in parallel with the introduction of Java's basic data types, arithmetic operations, control structures, and file I/O. Students see first hand how the library of objects steadily grows larger, enabling ever more sophisticated applications to be developed through reuse. Later chapters focus on inheritance and polymorphism using the firm foundation that has been established by steadily developing numerous classes in the early part of the text. A new chapter on Data Structures and Collections has been added, making the text ideal for a one or two semester course. With its numerous new case studies, end of chapter material, and clear descriptive examples, the Second Edition is an exceptional text for discovering Java as a first programming language. *How to Study for Standardized Tests* Donald J.
