**Smart Things** Mike Kuniavsky, 2010-09-14 The world of smart shoes appliances and phones is already here but the practice of user experience UX design for ubiquitous computing is still relatively new Design companies like IDEO and frogdesign are regularly asked to design products that unify software interaction device design and service design which are all the key components of ubiquitous computing UX and practicing designers need a way to tackle practical challenges of design Theory is not enough for them luckily the industry is now mature enough to have tried and tested best practices and case studies from the field Smart Things presents a problem solving approach to addressing designers needs and concentrates on process rather than technological detail to keep from being quickly outdated It pays close attention to the capabilities and limitations of the medium in question and discusses the tradeoffs and challenges of design in a commercial environment Divided into two sections frameworks and techniques the book discusses broad design methods and case studies that reflect key aspects of these approaches The book then presents a set of techniques highly valuable to a practicing designer It is intentionally not a comprehensive tutorial of user centered design as that is covered in many other books but it is a handful of techniques useful when designing ubiquitous computing user experiences In short Smart Things gives its readers both the why of this kind of design and the how in well defined chunks Tackles design of products in the post Web world where computers no longer have to be monolithic expensive general purpose devices Features broad frameworks and processes practical advice to help approach specifics and techniques for the unique design challenges Presents case studies that describe in detail how others have solved problems managed trade offs and met successes **Public and Situated**

**Displays** K. O'Hara, M. Perry, E. Churchill, D. Russell, 2013-03-09 Public and situated display technologies can have an important impact on individual and social behaviour and present us with particular interesting new design considerations and challenges While there is a growing body of research exploring these design considerations and social impact this work remains somewhat disparate making it difficult to assimilate in a coherent manner This book brings together the perspectives of key researchers in the area of public and situated display technology The chapters detail research representing the social technical and interactional aspects of public and situated display technologies The underlying concern common to these chapters is how these displays can be best designed for collaboration coordination community building and mobility Presenting them together allows the reader to examine everyday display activities within the context of emerging technological possibilities Developing In-House Digital Tools in Library Spaces Costello, Laura, Powers, Meredith, 2017-08-11 Library services are dependent on technology tools in order to host distribute and control content Today many libraries are creating testing and supporting their own tools to better suit their particular communities Developing In House Digital Tools in Library Spaces is a pivotal reference source with the latest empirical research on organizational issues examples of library automation case studies of developing library products and assessment of the

impact and usefulness of in house technologies Featuring coverage on a broad range of topics such as linked data mobile applications and web analytics this book is ideally designed for academicians researchers students and librarians seeking current research on technological products and their development in library use **Intelligent Perceptual Systems** Vito Roberto,1993-11-10 Perceptual processes in humans and machines investigated and simulated by means of the computational approach are the subject matter of this volume Researchers in artificial intelligence pattern recognition and psychology discuss aspects of vision speech understanding sensory motor coordination and their interplay with cognitive and behavioral functionalities The papers adopt the computational approach as the basic research paradigm Connectionist models numerical and statistical techniques symbolic logic based formalisms and hybrid representations provide the formal background to the research Some of the papers were prepared for a workshop held in Trieste Italy in October 1992 **We Are All Migrants** Gregory Feldman,2015-05-27 Now more than ever questions of citizenship migration and political action dominate public debate In this powerful and polemical book Gregory Feldman argues that We Are All Migrants By challenging the division between those considered citizens and migrants Feldman shows that both subjects confront disempowerment uncertainty and atomization inseparable from the rise of mass society the isolation of the laboring individual and the global proliferation of rationalized practices of security and production Yet this very atomization the ubiquitous condition of migrant hood pushes the individual to ask an existential and profoundly political question do I matter in this world Feldman argues that for particular individuals to answer this question affirmatively they must be empowered to jointly constitute the places they inhabit with others Feldman ultimately argues that to overcome the condition of migrant hood people must be empowered to constitute their own sovereign spaces from their particular standpoints Rather than base these spaces on categorical types of people these spaces emerge only as particular people present themselves to each other while questioning how they should inhabit it [Catalog of Copyright Entries. **Linking Architecture and Education** Anne Taylor,2009-05-16 For the past forty years Anne Taylor has studied how schools classrooms playgrounds homes museums and parks affect children and how they learn As a result she has developed a holistic sustainable philosophy of learning environment design She argues persuasively that architects must integrate their design knowledge with an understanding of the developmental needs of learners while at the same time educators parents and students must broaden their awareness of the built natural and cultural environment to maximize the learning experience In other words schools and other environments can themselves become three dimensional textbooks When architects are cognizant of newer models of education and educators view the environment as more than a box in which to teach prescribed lessons the result is an informed architecture that enables children to discover the power of their own learning The book presents numerous examples of dynamic designs that are the result of interdisciplinary understanding of place Taylor includes designer perspectives forums derived from commentary by outside contributors involved in school planning and a wealth of photographs of thoughtful and effective solutions to create learning environments from comprehensive design criteria Because the concept of school is enlarged to a community campus the book also spawns a new model of teaching and learning This book is essential reading for educators architects and community members who are anxious to transform education in America and elsewhere Anne Taylor is the most outstanding educator leading proponent and practitioner in the three dimensional textbook field Her work is the finest resource available for connecting students young and old to their learning environments and visa versa Edward E Kirkbride NCARB REFP Before Western man divided the universe into discrete subject matter areas the order in the universe was and still is both interdisciplinary and holistic The branching of trees spiraling of shells meandering of streams and the radial designs of flowers for example represent an analogy of mathematics biology and art The current artificial separation of subject matter is in contrast to the way the world is constructed and the way children perceive it Architecture and the study of the built natural and cultural environment synthesize the world of material things and the world of ideas Further more it helps us to realize that we are a part of not apart from the environment This book is a tool and a gift to designers educators and students everywhere to assist them in seeing the meaning behind all that we view and use for living on earth To know our precious relationship to our surroundings
