Optimization and Optimal Control in Automotive Systems Harald Waschl,Ilya Kolmanovsky,Maarten Steinbuch,Luigi del  
Re,2014-03-20 This book demonstrates the use of the optimization techniques that are becoming essential to meet the  
increasing stringency and variety of requirements for automotive systems It shows the reader how to move away from earlier  
approaches based on some degree of heuristics to the use of more and more common systematic methods Even systematic  
methods can be developed and applied in a large number of forms so the text collects contributions from across the theory  
methods and real world automotive applications of optimization Greater fuel economy significant reductions in permissible  
emissions new drivability requirements and the generally increasing complexity of automotive systems are among the criteria  
that the contributing authors set themselves to meet In many cases multiple and often conflicting requirements give rise to  
multi objective constrained optimization problems which are also considered Some of these problems fall into the domain of  
the traditional multi disciplinary optimization applied to system sub system or component design parameters and is  
performed based on system models others require applications of optimization directly to experimental systems to determine  
either optimal calibration or the optimal control trajectory control law Optimization and Optimal Control in Automotive  
Systems reflects the state of the art in and promotes a comprehensive approach to optimization in automotive systems by  
addressing its different facets by discussing basic methods and showing practical approaches and specific applications of  
optimization to design and control problems for automotive systems The book will be of interest both to academic

researchers either studying optimization or who have links with the automotive industry and to industrially based engineers and automotive designers      **Technometrics** ,1998      *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1971
