

## Rounding and estimating

Some exam questions may ask you to give the answer in a simplified form. Rounding and estimating are two ways to make numbers easier to manage.

### (1) Rounding numbers

Giving the complete number for something is sometimes unnecessary. For instance, the attendance at a football match might be **23745**. But for most people who want to know the attendance figure, an answer of '**nearly 24000**', or '**roughly 23700**', is fine.

We can round off large numbers like these to the nearest thousand, nearest hundred, nearest ten, nearest whole number, or any other specified number.

Round **23,745** to the nearest thousand.

First, look at the digit in the thousands place. It is 3. This means the number lies between 23000 and 24000. Look at the digit to the right of the 3. It is 7. That means 23,745 is closer to **24,000** than 23,000.

#### Remember

The rule is, if the next digit is: **5 or more**, we '**round up**'. **4 or less**, it stays as it is.

23745 to the nearest thousand = **24000**.

23745 to the nearest hundred = **23700**.

#### Question

What is 23,745 rounded to the nearest ten?

### (2) Decimal places

Sometimes, rather than rounding off to the nearest whole number, you might need to be a little more accurate. You might need to include some of the digits after the decimal point.

In these cases, we can round off the number up to a certain number of decimal **places**.

Do not confuse this with rounding off using significant **figures**, as this is slightly different!
