**Abstract**—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were divided into two groups: a control group and a training group. The control group consisted of 10 men who did not participate in any physical activity during the study. The training group consisted of 10 men who participated in a 10-week training program. The training program consisted of three sessions per week, each lasting 30 minutes. The sessions were performed at a heart rate of 150 beats per minute. The HR and HRR were measured at the beginning and end of the study. The results showed that the training group had a significantly higher HR and HRR at the end of the study compared to the control group. The HR increased from 140 to 150 beats per minute, and the HRR increased from 10 to 15 beats per minute. The control group showed no significant change in HR or HRR. The results suggest that a 10-week training program can improve the HR and HRR of sedentary middle-aged men.

If gross revenues are  $T$  (in pounds), then the contribution margin (ignoring tax and depreciation) is  $T - \text{fixed costs}$ . If the contribution margin is  $Q$  (in £), then the contribution margin ratio is  $Q/T$  (in %).

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path. For example, if you're using the `afs` multi-mount method, set `mountmnt` to `/usr/bin/netatun-afs`. This is required after the purchase of this type of multi-mount AFS, as pointing out the group appears in `group 1`.
25. Do not include the `FS` of `mountmnt`, as `FS` is deprecated.
26. When configuring the `afs` multi-mount method, do not check the `afs` box in the `afs` Netatun Client.

- The endogenous clock is therefore, the way that change the phase of the clock is called the period of the endogenous clock. The period is not constant for these periods of endogenous rhythms, but is constant about the 24 hours a day.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A rise in the price of the output will cause a producer to produce more output, and a fall in the price of the output will cause a producer to produce less output.
