

Ray Optics PhET Lab

Introduction:

When you hold your glasses far away from your face, what do you see? If you look through a magnifying glass and move it away from your face, something odd happens as you look through the moving lens. The light that reflects off images and passes through a lens before it arrives at your eye can be simulated as a series of rays. In this lab, you will investigate lens optics using the 3-ray system (parallel-focal, focal-parallel, central). Remember, the real focal point of a lens is *behind* the lens. The lens we will use in this simulation is a thin double-convex lens. **Warning:** For the measurements taken in this lab, the ruler in the PhET program only works horizontally. Therefore, we will use a standard ruler measuring from the computer monitor. The scale used to make these measurements will change from computer to computer so once you start, you must finish.

Geometric Optics

Important Formulas: $\frac{1}{f} = \frac{1}{d_o} + \frac{1}{d_i}$ or $\frac{1}{f} = \frac{1}{p} + \frac{1}{q}$ $\frac{1}{f} = (n - 1) \frac{2}{R}$ $m = \frac{h_i}{h_o} = \frac{-d_i}{d_o}$ or $m = \frac{h_i}{h_o} = \frac{-q}{p}$

If you don't recognize symbols, look them up in the text. Also, please note that in some texts, the object's distance is given by "p" and the image's by "q".

Procedure: *PhET Simulations* → *Play With Sims* → *Light and Radiation* → *Geometric Optics* **Run Now**

- Take some time and familiarize yourself with the simulation. You are able to move the object and the lens and change the characteristics of the lens. During this lab, be sure to always anchor your image on the principal axis. The pencil's eraser works well for this.
- For best results change your view to full screen (View/Full Screen OR F11). To exit full screen, move your cursor to the top of the monitor screen, right-click and select "Exit Full Screen Mode."
- Click **Principal rays** to draw the rays using the 3-ray system you learned in class.
- Move the object towards the lens. What happens to the image formed on the other side of the lens?

- As you move the object inside the lens' focal point something odd happens. Rays that don't meet **diverge**. Does this mean no image will be formed? _____ Where is the image? _____
- Click on "Virtual Image." How are a real image and a virtual image similar? _____ How are they different? _____
- Click on the ruler. You will need to make several measurements during the lab. You may, if you wish, leave your measurements in **cm** when using the formulas given above.
- Set the lens's refractive index (n) to 1.8 and the radius of curvature (R) to 0.7m. Use the appropriate equation above to solve for the focal distance (f). $f =$ _____

(Measure the focal distance to confirm your answer.)
