Vodafone Text Delivery Report:

Short Message Service (SMS) Friedhelm Hillebrand, 2010-01-21 Contributions from Finn Trosby Kevin Holley Ian Harris Written to celebrate the 25th anniversary of SMS standardization by the people who produced the standards Short Message Service SMS The Creation of Personal Text Messaging describes the development of the SMS standard and its ongoing evolution The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM and the 25th anniversary of the first work on SMS provides an opportunity to review and understand how this service was developed The book also looks to the future as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service a new simple Multimedia Messaging Service MMS suitable for use by everyone and for implementation in every new terminal is proposed One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its evolution to the present day Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept Based on existing and newly retrieved documentation Concludes that SMS has a long future since most future GSM phones will support SMS as the only messaging service and so an SMS evolution is put forward

MMS Daniel Ralph, Paul Graham, 2004-04-21 MMS has evolved from the huge popularity of the SMS text service for GSM networks It is a departure from the transport mechanism used for SMS which is based on the GSM signalling channels to the use of IP to transport messages within the MMS network To this end MMS has similarities with Internet email and standard IETF protocols As with any new technology it is difficult to accurately predict the position within the next 5 years although based on previous experience with WAP and SMS it would be fair to say that these protocols will increase in usage over the next 5 years and become legacy for a further 5 years following which users will migrate onto the next wave of messaging Significant revenue growth and data usage is expected to be driven by consumer usage of MMS But MMS technology offers more than just a broadening of message content With MMS it is not only possible to send your multimedia messages from one phone to another but also from phone to email and vice versa This feature dramatically increases the possibilities of mobile communication both for private and corporate use Multimedia messaging will reshape the landscape of mobile communication making it more personal more versatile and more expressive than ever before MMS Is the first book to address how MMS and the use of IP to transport messages will affect existing infrastructure and business models Covers the fundamental changes to mail and billing systems Includes future recommendations such as interoperability and evolution Presents an overview of the MMS technology components Drawing on the authors hands on experience in the implementation of MMS technology developing billing and delivering services at BT this innovative book will appeal to engineering managers network operators market analysts business decision makers content providers and operator organizations **Global Transport** ,1998 **Electronic Marketing** John O'Connor, Eamonn Galvin, Martin J.
