Immunology Methods Manual: Expression of recombinant proteins Ivan Lefkovits, 1997 *Prospects and Applications for Plant-Associated Microbes, A laboratory manual* Seppo Sorvari, Anna Maria Pirttilä, 2014-12-15 Research on the microbial colonization of the aerial and subterranean tissues of plants has shown an extensive scale of interactions between the hosts and a range of microbes including bacteria and fungi Intercellular spaces vascular systems and even single cells can be inhabited by these endophytic microbes Of the bacterial endophytes only a small percentage is harmful to the plant most are neutral opportunistic or beneficial These plant based bacteria can have various important functions throughout the life cycle of the plant some promote plant growth and development others protect the plant from diseases This ability to be able to protect plants from diseases has catalyzed numerous laboratories to search for new bacteria that could be utilized instead of the traditional plant protective agents Because two or more interacting organisms are involved research and the eventual application of suitable bio controlling microbes are challenging and often require specific skills and equipment The purpose of this book is to provide a comprehensive review for those who are interested in the research and biotechnological applications of plant associated bacteria It also provides a compilation of current work conducted on plant bacteria interactions

Hemoglobin Disorders Ronald L. Nagel, 2008-02-01 Hemoglobin and Hemoglobinologists This volume Hemoglobin Disorders Molecular Methods and Protocols will be introduced with a review of the great milestones in the field and the scientists responsible for those achievements The history of hemoglobin can be divided into three periods the Classical period the Modern period and the Post Modern period I am inclined to include as the four major members of the classical period Francis Roughton Quentin Gibson Jeffries Wyman and Linus Pauling not only because of their achievements but also because of the superb scientists they trained and or influenced Francis John Worsely Roughton 1899 1972 Fig 1 in his laboratory at Trinity College in Cambridge England made the first measurements of the rapid reaction of oxygen with hemoglobin at the millisecond scale at first by flow mixing methods and later by flash photolysis He not only opened an era of molecular research of hemoglobin but also invented the methodology for fast reactions through the use of laser technology which was later improved by others so that even faster reactions could be detected Another contribution of Roughton was the education of Quentin H Gibson Fig 2 his favorite student who in his laboratory in Sheffield continued to expand the horizon of ligand binding to hemoglobin defining the oxygen binding constants for each of the hemes of hemoglobin Though this did not as expected solve the underlying mechanism of ligand cooperativity as discussed below it was nonetheless an important milestone
