RCA's latest DOCSIS 2.0 certified cable modem, the DCM425, merges much the latest generation of silicon. The DCM425 supports up to 10 upstream flows and improved data throughput rates. It represents a significant improvement of our DOCSIS product line in a small form factor.

The 10 upstream flows allow operators to provide burst data service and support more efficient traffic prioritization schemes for advanced services. The DCM425 allows symmetrical data transfer, and highest upstream throughput.

The modem also integrates Proprietary™ technology, enabling the connection of more Internet users without additional network bandwidth. RCA's new design is consistent throughout its product line of cable modems and gateways.

DOCSIS Based Design

This cable modem is certified to work on any DOCSIS-based HFC cable system (DOCSIS1.0, DOCSIS1.1, or DOCSIS2.0).

Bridging

Allows simultaneous connection of two PCs and enables Ethernet and USB port data traffic bridging.

LED Start-Up Indicators

Simple-to-Use Illustrated Setup Guide

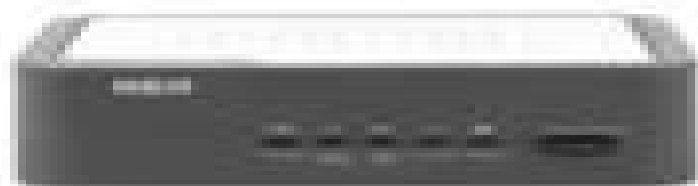

The guide steps users through the connections of the broadband cable, electrical power, and Ethernet or USB cables.

Red light prevents unnecessary touch calls.

Internet Web Pages

The DCM425 includes multiple integrated Web pages allowing direct access to information about the status of the modem and product settings including privacy and security.

Internet Security Button

Turning the modem off puts the modem into "standby" mode. The modem remains locked to the CMTS, responding to SAAAP, enabling subscribers to resume activity quickly when logged again. The button serves as a security feature, ensuring the customer that the PC/network connection is deactivated when the button is in the off position, attenuating security concerns of an "always on" connection.

Proprietary Technology

This advanced transport technology (Dynamic Payload Header Suppression) provides the subscriber with faster data transfers. It also allows operators to increase the number of subscribers on their network without affecting subscriber connection speeds. Under typical network conditions, both the subscribers and operators can benefit from more data bandwidth per customer, and of more voice channels for IP telephony.
