1. How can rates of chemical change expressed?

Rates of chemical change are usually expressed in dimensions of moles/liters/second per unit time.

3. What does collision theory say about the reaction of atoms, ions, or molecules resulting in some products when they collide?

Collision theory states that the molecules must have enough kinetic energy when they collide to form products.

4. Look at the Space below. One shows a collision that results in the formation of product. Label it effective collision. Label the other collision's distribution collision.

5. In the following sentence, true or false? Particles lacking the necessary kinetic energy to react become apart unchanged when they collide. True

6. Look at Figure 18.3 on page 543. Which arrangement of atoms models the least amount of energy?
