This book provides a clear, concise, complete, and authoritative introduction to System Architecture Evolution (SAE) standardization work and its main outcome, the Evolved Packet Core (EPC), including potential services and operational scenarios. After providing an insightful overview of SAE's historical development, the book gives detailed explanations of the EPC architecture and key concepts as an introduction. In-depth technical descriptions of EPC follow, including thorough functional accounts of the different components of EPC protocols, network entities, and procedures. Case studies of deployment scenarios show how the functions described within EPC are placed within a live network context, while a description of the services that are predicted to be used shows what EPC as a core network can enable. This book is an essential resource for professionals and students who need to understand the latest developments in SAE and EPC, the engine that connects broadband access to the internet. All of the authors have, from their positions with Ericsson, been actively involved in GPRS, SAE, and 3GPP from a business and technical perspective for many years. Several of the authors have also been actively driving the standardization efforts within 3GPP. There is no doubt that this book, which appears just when the mobile industry starts its transition away from legacy GSM, GPRS, and UMTS networks into the future, will become the reference work on SAE/LTE. There are no better qualified persons than the authors of this book to provide both communication professionals and an interested general public with insights into the inner workings of SAE/LTE. Not only are they associated with one of the largest mobile network equipment vendors in the world; they have all actively contributed to, and in some cases been the driving forces behind, the development of SAE/LTE within 3GPP. From the foreword by Dr. Ulf Nilsson, TeliaSonera R&D Mobility Core and Connectivity. The authors have done an excellent job in writing this book. Their familiarity with the requirements, concepts, and solution alternatives, as well as the standardization work, allows them to present the material in a way that provides easy communication between Architecture and Standards groups and Planning/Operational groups within service provider organizations. From the foreword by Dr. Kalyani Bogineni, Principal Architect, Verizon. Up-to-date coverage of SAE, including the latest standards development. Easily accessible overview of the architecture and concepts defined by SAE. Thorough description of the Evolved Packet Core for LTE, fixed, and other wireless accesses. Comprehensive explanation of SAE key concepts: security and Quality of Service. Covers potential service and operator scenarios, including interworking with existing 3GPP and 3GPP2 systems. Detailed walkthrough of network entities, protocols, and procedures. Written by established experts in the SAE standardization process, all of whom have extensive experience and understanding of its goals, history, and vision. **CliffsTestPrep Regents Living Environment Workbook** American BookWorks Corporation, 2008-06-02. [Nonlinear Periodic Waves And Their Modulations: An Introductory Course](#) Anatoly M Kamchatnov, 2000-09-05 Although the mathematical theory of nonlinear waves and solitons has made great progress its applications to concrete physical problems are rather poor especially when compared with the classical theory of linear dispersive waves and nonlinear fluid motion The Whitham method which describes the combining action of the dispersive and nonlinear effects as modulations of periodic waves is not widely used by applied mathematicians and physicists though it provides a direct and natural way to treat various problems in nonlinear wave theory Therefore it is topical to describe recent developments of the Whitham theory in a clear and simple form suitable for applications in various branches of physics This book develops the techniques of the theory of nonlinear periodic waves at elementary level and in great pedagogical detail It provides an introduction to a Whitham s theory of modulation in a form suitable for applications The exposition is based on a thorough analysis of representative examples taken from fluid mechanics nonlinear optics and plasma physics rather than on the formulation and study of a mathematical theory Much attention is paid to physical motivations of the mathematical methods developed in the book The main applications considered include the theory of collisionless shock waves in dispersive systems and the nonlinear theory of soliton formation in modulationally unstable systems Exercises are provided to amplify the discussion of important topics such as singular perturbation theory Riemann
