*Development of a Decentralized Drinking Water Treatment Plant Based on Membrane Technology for Rural Areas in Vietnam* Ngoc Dao Trinh, 2018-06-28 Membrane technology with effective removal of microbial contaminants has been applied widely in drinking water treatment DWT but its sustainable and efficient application in rural areas still needs practical research Backflushing and chemical cleaning are well investigated for membrane based systems However these methods are not always followed properly and in full especially in cases of applications for remote areas in developing countries Important key challenges in real world applications are how the system would actually sustain with unskilled personnel with no electric power for backflushing or with no chemical cleaning on the long run These challenges were addressed within the framework of this dissertation A dead end Ultrafiltration UF with flat

sheet membranes was configured to a stationary DWT system working with low pressure and simplest maintenance in combination with a suitable chlorination solution without energy demand In the literature review of this dissertation an overview of many up to date membrane based systems in different categories of use is given in detail covering different aspects of technology service efficiency and economics Hydraulic performance of membrane based systems is normally studied in lab scale in limited periods from hours to days Thus highlight of this research is the investigation of a full scale demonstration plant based on UF flat sheet membrane with pore size of 40 nm conducted in the Hydraulic Workshop at the University of Kassel operated continuously day and night for long term tests The long term examination focused on many aspects from hydraulic performance including flux permeability transmembrane pressure efficiency of the simple membrane cleaning methods to biological quality of treated water and also efficiency of chlorination by using a mechanical chlorine dosing device During long term examination the phenomenon of gas generation from the water in the plant was recognized The influence of this phenomenon on the permeate flow rate was evaluated and solution for this problem by the gas trapping device was investigated in this research The experimental results from long term examination of the Pilot Plant at the University of Kassel served for the materialization of the system into life Two DWT plants were implemented in a rural village in southern Vietnam It could be proved that the product of this research is realistically an economic relief of the long lasted insufficient supply to the crucial demand for safe water in the rural communities of developing countries

**Securing Safe Water Supplies** Erik Voigt, Henry Jaeger, Dietrich Knorr, 2012-09-27 Available water disinfection systems rely mainly on large scale filtration and the combination of filtration to remove solids and subsequent application of chemical disinfectants This has proven to produce water of acceptable quality Important points for application in household systems are low complexity few training requirements and easy transportation and distribution as well as a sufficiently high acceptance by the user Written and endorsed by the European Federation of Food Science and Technology this book compares a variety of purification systems There is a growing evidence base on targeting water quality improvements to maximize health benefits and it is believed that 4% of the global disease burden could be prevented by improving water supply sanitation and hygiene Better tools and procedures to improve and protect drinking water quality at the community and urban level for example through Water Safety Plans include the availability of simple and inexpensive approaches to treat and safely store water at the household level Provides single source comparison of advantages and disadvantages relevant to the various practices of multiple water treatments Acknowledges the limitations of governmental interventions that need to be supplemented by individual practices such as home implementation systems Provides practical implementation insights and perspectives via graphs tables and charts that make information readily accessible and comparable
