*Advances in Cryptology - CRYPTO 2002* Moti Yung, 2003-08-02 CRYPTO 2002 the 22nd Annual Crypto Conference was sponsored by IACR the International Association for Cryptologic Research in cooperation with the IEEE Computer Society Technical Committee on Security and Privacy and the Computer Science Department of the University of California at Santa Barbara. It is published as Vol 2442 of the Lecture Notes in Computer Science LNCS of Springer Verlag. Note that 2002 22 and 2442 are all palindromes. The conference received 175 submissions of which 40 were accepted. Two submissions were merged into a single paper yielding a total of 39 papers accepted for presentation in the technical program of the conference. In this proceedings volume you will find the revised versions of the 39 papers that were presented at the conference. The submissions represent the current state of work in the cryptographic community worldwide covering all areas of cryptologic research. In fact many high quality works that surely will be published elsewhere could not be accepted. This is due to the competitive nature of the conference and the challenging task of selecting a program. I wish to thank the authors of all submitted papers. Indeed it is the authors of all papers who have made this conference possible regardless of whether or not their papers were accepted. The conference program was also immensely benefited by two plenary talks.

*Advances in Information and Computer Security* Kanta Matsuura, Eiichiro Fujisaki, 2008-11-13 The Third International Workshop on Security IWSEC 2008 was held at Kagawa International Conference Hall Kagawa Japan November 25-27 2008. The workshop was co-sponsored jointly by CSEC a special interest group on computer security of IPSJ Information Processing Society of Japan and ISEC a technical group on information security of the IEICE The Institute of Electronics Information and Communication Engineers. The excellent Local Organizing Committee was led by the IWSEC 2008 General Co-chairs Masato Terada and Kazuo Ohta. This year there were 94 paper submissions from all over the world. We would like to thank all the authors who submitted papers to IWSEC 2008. Each paper was reviewed at least three reviewers. In addition to the members of the Program Committee many external reviewers joined the review process of papers in their particular areas of expertise. We were fortunate to have this energetic team of experts and are grateful to all of them for their hard work. The hard work includes very active discussion. The discussion phase was almost as long as the initial individual reviewing. The review and discussion were supported by a very nice Web-based system iChair. We appreciate its developers. After all the review phases 18 papers were accepted for publication in this volume of *Advances in Information and Computer Security*. In the workshop the contributed papers were supplemented by one invited talk from eminent researcher Alfred Menezes of the Centre for Applied Cryptographic Research The University of Waterloo. There are many people who contributed to the success of IWSEC 2008. We wish to express our deep appreciation for their contribution to information and computer security. **Advances in Cryptology - ASIACRYPT 2024** Kai-Min Chung, Yu Sasaki, 2024-12-11 The 9 volume set LNCS 15484-15492 constitutes the refereed proceedings of the 30th International Conference on the Theory and Application of Cryptology and Information

Iterated Function Systems, Moments, and Transformations of Infinite Matrices Palle E. T. Jørgensen, Keri A. Kornelson, Karen L. Shuman, 2011. The authors study the moments of equilibrium measures for iterated function systems (IFSs) and draw connections to operator theory. Their main object of study is the infinite matrix which encodes all the moment data of a Borel measure on  $\mathbb{R}^d$  or  $\mathbb{C}$ . To encode the salient features of a given IFS into precise moment data, they establish an interdependence between IFS equilibrium measures, the encoding of the sequence of moments of these measures into operators, and a new correspondence between the IFS moments and this family of operators in Hilbert space. For a given IFS, the authors' aim is to establish a functorial correspondence in such a way that the geometric transformations of the IFS turn into transformations of moment matrices or, rather, transformations of the operators that are associated with them.
