**CONCLUSIONS** The design of a new generation of microfluidic devices for the study of the interaction of cells with microstructures is presented. The design of the microfluidic devices is based on the use of a new generation of microfluidic devices for the study of the interaction of cells with microstructures. The design of the microfluidic devices is based on the use of a new generation of microfluidic devices for the study of the interaction of cells with microstructures.

Flowing water provides a constant habitat for many species of plants and animals. The water is constantly moving, which allows for a constant supply of oxygen and nutrients. The water is also constantly being replenished, which allows for a constant supply of water. The water is also constantly being filtered, which allows for a constant supply of clean water.

The 400-ppm  $\delta$  value is a good indicator of the degree of chlorination for the compound. While considering the modified compound only, we have observed that the  $\delta$  value is proportional to the number of chlorine atoms in the molecule. The  $\delta$  value for the compound is 400 ppm, which is in good agreement with the value of 400 ppm for the compound.
