Human Aging and Chronic Disease Cary Steven Kart, Seamus P. Metress, 1992 Morphology of the Auditory and Vestibular Organs in Mammals, with Emphasis on Marine Species Galina Solntseva, 2007-07-03 This monograph describes the directions of the structural evolution of the peripheral part of the auditory system in representatives of different ecological groups of mammals. Special attention is paid to the least studied orders of marine mammals: pinnipeds and cetaceans, being of great interest both with regards to the echolocating abilities in dolphins and the influence of the aquatic environment on the development of morphological adaptations in the structure of the outer, middle and inner ears. Undertaken for the first time, a comparative embryological study of the peripheral part of the auditory system in marine mammals allowed the author to reveal the developmental pattern of the auditory and equilibrium organs in animals with a different auditory specialization. The influence of ecological factors on the adaptive trait development in the structural organization of the outer, middle and inner ears in semi-aquatic and aquatic species is discussed. The book is illustrated with a large number of high quality micro photos. readership Recent research in sensory physiology has progressed so rapidly that this third edition like the second has required thorough revision The understanding of pain in particular has increased to a remarkable degree This development is reflected here in the appearance for the first time of a chapter devoted entirely to the subject Nociception and Pain In view of the great clinical significance of pain it seemed necessary to broaden the scope of the discussion so that in addition to the aspects directly related to sensory physiology consideration is given to the pathophysiology pharmacology and psychology of pain The chapters present in earlier editions have also been carefully reexamined and where necessary revised and extended Most of the illustrations provided for the first edition by the Stuttgart studio Gay Benz have been retained Some required alteration or replacement and a number of new illustrations have been added For the meticulous skill with which she transformed our ideas into graphs and drawings we are most grateful to Mrs Regine Gattung Petith *Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Sensation, Perception, and Attention*, 2018-03-13 II Sensation Perception visual object recognition touch depth perception motor control perceptual learning the interface theory of perception vestibular proprioceptive and haptic contributions to spatial orientation olfaction audition time perception attention perception and interactive technology music perception multisensory integration motion perception vision perceptual rhythms perceptual organization color vision perception for action visual search visual cognition working memory
