Life beyond Earth Athena Coustenis, Thérèse Encrenaz, 2013-09-12

What is life and where can it exist? What searches are being made to identify conditions for life on other worlds? If extraterrestrial inhabited worlds are found, how can we explore them? In this book, two leading astrophysicists provide an engaging account of where we stand in our quest for habitable environments in the Solar System and beyond. Starting from basic concepts, the narrative builds scientifically, including more in-depth material as boxed additions to the main text. The authors recount fascinating recent discoveries from space missions and observations using ground-based telescopes of possible life-related artefacts in Martian meteorites, extrasolar planets and subsurface oceans on Europa, Titan and Enceladus. They also provide a forward look to future missions. This is an exciting, informative read for anyone interested in the search for habitable and inhabited planets and an excellent primer for students in astrobiology, habitability, planetary science and astronomy.

Fundamentals of Organic Chemistry T. W. Graham Solomons, 1990-01-16

The Third Edition of the abridgement of the author's *Organic Chemistry* contains all the material of the parent text except for the chapters on special topics and nucleic acids. This volume, unlike the previous two editions, has a full color format which makes the illustrative material much more effective and informative. The Third Edition also features an early treatment of stereochemistry and the use of ionic reactions to introduce mechanisms. Alcohols and ethers, as well, are introduced early on and features an expanded treatment of organic synthesis and many new problems.

Colour and the Optical Properties of Materials Richard J. D. Tilley, 2010-12-20

Colour and the Optical Properties of Materials carefully introduces the science behind the subject along with many modern and cutting-edge applications chosen to appeal to today's students. For science students, it provides a broad introduction to the subject and the many applications of colour. To more applied students, such as

engineering and arts students it provides the essential scientific background to colour and the many applications New to this Edition The chapter framework of the first edition will be retained with each chapter being substantially rewritten and some material would be relocated Some chapters will be rewritten in a clearer fashion e g There have been no significant advances in the understanding of rainbows recently but the text could be clarified and improved Colour has been an important attribute of many nano particle containing systems such as quantum dots This aspect will be included e g the colour of gold ruby glass described in Chapter 5 as part of scattering phenomena now is better treated in terms of gold nanoparticles and surface plasmons This would probably be transferred to Chapter 10 and considered in tandem with the colour of metals such as copper silver and gold A similar state of affairs applies to silver nanoparticles and polychromic glass Some chapters will include extensive new material e g Chapter 8 colours due to molecular processes organic LEDs etc and Chapter 12 Displays touch screen technologies For all chapters it would be intended to take into account the current scientific literature up to the time of submission say up to the end of 2009 The end of chapter Further Reading sections would reflect this up to date overview The end of chapter problems will be strengthened and expanded
