De Gruyter Handbook of Drone Warfare James Patton Rogers, 2024-09-02 In 2010, 60 states had a military drone program. Today, at least 113 countries and 65 non-state actors now have access to weaponized drone technologies. Alongside this established drone powers, the U.S., China, Turkey, and Iran have expanded their own use of military drones, increasing the sale and deployment of drones around the world. In the *De Gruyter Handbook of Drone Warfare*, drone expert, policy adviser and historian Dr. James Patton Rogers brings together 37 of the world's leading voices on the growing issues of commercial and military drone technologies. From the origins of military drones in the early 1900s and the resurgence of drone use during the War on Terror through to the global proliferation of drones across Europe, Africa, and the Middle East, this handbook explores the moral, ethical, technological, legal, military, geopolitical, social, and strategic issues at the heart of drone warfare. The first handbook of its kind, the volume also addresses Russia's offensive war against Ukraine, the rise of Iranian and Houthi drones, and provides a focused analysis of the future of drone warfare and the opportunities

and perils of AI autonomy and swarming technologies in the coming Third Drone Age      **Robotic Systems** Ashish Dutta,2012-02-03 This book brings together some of the latest research in robot applications control modeling sensors and algorithms Consisting of three main sections the first section of the book has a focus on robotic surgery rehabilitation self assembly while the second section offers an insight into the area of control with discussions on exoskeleton control and robot learning among others The third section is on vision and ultrasonic sensors which is followed by a series of chapters which include a focus on the programming of intelligent service robots and systems adaptations      **Literacy, Language, and Learning: Early Childhood Themes: Five Senses Teacher's Guide** Linda Vander Wende,2013-08-01      *Handbook of Research on Integrating ICTs in STEAM Education* Xefteris, Stefanos,2022-05-27 Modern society gives great importance to scientific and technological literacy development of 21st century skills and creating individuals who are not passive users of ICT tools but active thinkers and even tinkerers The learning process is thus constantly evolving to facilitate the acquisition of such skills such as setting goals and making evidence based decisions thinking critically and solving problems while efficiently managing time as well as using technology cooperating ethically and communicating effectively STEAM is the approach to learning that uses concepts from natural sciences technology engineering arts and mathematics to foster critical thinking computational and design thinking as well working effectively together mimicking the process followed by scientists The end goal is engaged and motivated students who participate in experiential and inquiry based learning in fun immersive environments that facilitate learning through a creative process The Handbook of Research on Integrating ICTs in STEAM Education includes current research focusing on the development of STEAM and ICT educational practices tools workflows and frames of operation that encourage science skills but also skills related to the arts and humanities such as creativity imagination and reflection on ethical implications Covering topics such as early childhood education machine learning education educational robotics and web based simulations this major reference work is an essential resource for engineers educators of both K 12 and higher education education administration libraries pre service teachers computer scientists researchers and academics      [Tales from a Robotic World](#) Dario Floreano,Nicola Nosengo,2022-09-27 Stories from the future of intelligent machines from rescue drones to robot spouses and accounts of cutting edge research that could make it all possible Tech prognosticators promised us robots autonomous humanoids that could carry out any number of tasks Instead we have robot vacuum cleaners But as Dario Floreano and Nicola Nosengo report advances in robotics could bring those rosy predictions closer to reality A new generation of robots directly inspired by the intelligence and bodies of living organisms will be able not only to process data but to interact physically with humans and the environment In this book Floreano a roboticist and Nosengo a science writer bring us tales from the future of intelligent machines from rescue drones to robot spouses along with accounts of the cutting edge research that could make it all possible These stories from the not so distant future show us robots that can be used for mitigating effects of climate change providing healthcare working with

humans on the factory floor and more Floreano and Nosenko tell us how an application of swarm robotics could protect Venice from flooding how drones could reduce traffic on the congested streets of mega cities like Hong Kong and how a long term relationship model robot could supply sex love and companionship After each fictional scenario they explain the technologies that underlie it describing advances in such areas as soft robotics swarm robotics aerial and mobile robotics humanoid robots wearable robots and even biohybrid robots based on living cells Robotics technology is no silver bullet for all the world's problems but it can help us tackle some of the most pressing challenges we face

**Deployable Multimodal Machine Intelligence** Hongliang Ren, 2023-02-04 This book highlights the principles design and characterization of mechanically compliant soft and foldable robots Traditional rigid robots with bulky footprints and complicated components prolong the design iteration and optimization for keyhole and minimally invasive transluminal applications Therefore there is an interest in developing soft and foldable robots with remote actuation multimodal sensing and machine intelligence This book discusses the use of foldable and cuttable structures to design biomimetic deployable soft robots that can exhibit a fair number of motions with consistency and repeatability It presents the overall design principles methodology instrumentation metamorphic sensing multi modal perception and machine intelligence for creating untethered foldable active structures These robotic structures can generate a variety of motions such as wave induction compression inchworm peristalsis flipping tumbling walking swimming flexion extension etc Remote actuation can control motions along regular and irregular surfaces from proximal sides For self deployable medical robots motion diversity and shape reconfiguration are crucial factors Deployable robots with the use of malleable and resilient smart actuators hold this crucial advantage over their conventional rigid robot counterparts Such flexible structures capable of being compressed and expanded with intelligence perceptions hold enormous potential in biomedical applications
