Guideline for Building Services Design Inspired by the Cradle to Cradle Concept Johannes Stiglmaier, Karsten Jurkait, 2020 The Cradle to Cradle C2C concept is a biomimetic approach that models human industry on nature s processes viewing materials as nutrients circulating in healthy and safe metabolisms It seeks to create systems that are not only efficient but also essentially waste free A growing number of building owners and developers are looking to implement it in their buildings be it to increase the productivity of their workforce or to provide a differentiator The C2C concept is reasonably covered in building construction however it is a rather uncharted area in building services making it difficult for MEP engineers to develop C2C inspired designs Arup set out to bridge this gap establishing how C2C inspired design would look like in the different MEP disciplines and researching which systems products and materials are available in the market to meet the corresponding criteria The result is a comprehensive guideline that enables MEP engineers to develop a C2C inspired design It covers design criteria system selection system sizing design for deconstruction as well as material and product selection for the main MEP disciplines and sets out a number of criteria by which the aptness of a design for C2C can be measured

Evaluation of the Trevipark Automated Parking System
Highway Innovative Technology Evaluation Center (U.S.),2001-01-01
Prepared by the Civil Engineering Innovative Technology Evaluation Center
a CERF innovation center serving the engineering and construction industries
This report presents a CEITEC evaluation of the Trevipark automated parking system which was developed designed and supplied by TREVI S p A of Cesena Italy
The evaluation is designed to determine the benefits and limitations of Trevipark for use as a technically viable automated vehicle parking system
The evaluation focused on data collection site inspections and analyses
The Trevipark system consists of a cylindrical enclosure with a central elevator system to park and store vehicles in a radial pattern
This proprietary system is intended to provide safe and secure parking for lower cost smaller site and space requirements less retrieval time and other advantages

Automated Parking Systems
Benjamin Ramirez,AI,2025-03-12
Automated Parking Systems explores the potential of robotic parking to revolutionize urban landscapes and address parking scarcity
It examines automated parking systems APS as a technologically advanced solution offering optimized space utilization compared to traditional parking garages
One intriguing fact is that APS can significantly reduce the space required for parking potentially freeing up

valuable land for other urban development purposes The book also highlights how APS contribute to smart city initiatives by reducing traffic congestion and promoting sustainable practices The book argues that APS are both technologically feasible and economically viable presenting them as a forward thinking alternative for urban planners and architects It begins by introducing the fundamental principles of APS operation and design Later chapters delve into specific technologies integration of sensors and control systems and architectural considerations for various building types The book progresses to analyze real world case studies and economic feasibility offering a comprehensive view of APS This book uniquely blends engineering precision with architectural vision providing a holistic perspective on APS It moves beyond technical descriptions to address the aesthetic and functional integration of these systems into urban environments By providing a comprehensive and evidence based overview of APS the book offers practical insights for planning design and implementation making it a key resource for professionals interested in architecture technology and urban development
