Aransas N.W.R., Gulf Intracoastal Waterway - Feasibility Study, Habitat Protection for the Whooping Crane ,1995 **State-of-the-art Marine Soil Mechanics and Foundation Engineering** Soils and Pavements Laboratory (U.S.),1972 **Astrophysics at Ultra-high Energies** Maurice Mandel Shapiro,Todor Stanev,J. P. Wefel,2007 This book introduces young researchers to the exciting field of ultra high energy astrophysics including charged particles gamma rays and neutrinos At ultra high energy the radiation is produced by interactions of cosmic ray particles accelerated in explosive events such as supernovae or hypernovae black holes or possibly the big bang Through direct contact with senior scientists now actively planning the next generation of experiments models the excitement and motivation for research at ultra high energy was conveyed The underpinning of these fields is a synthesis of knowledge and techniques from nuclear and particle physics astronomy and cosmology Informing the participants of this background how it was derived and the new challenges for the future are the major goal Further the course has helped to foster new astrophysical research and promoted contacts which have resulted in new collaborations

Heavy Elements And Related New Phenomena (In 2 Volumes) Walter Greiner,Raj Kumar Gupta,1999-06-17 This book reviews recent developments in the field of superheavy elements and the related phenomena of fission cluster radioactivity and drip line physics Both the experimental and theoretical aspects are dealt with in detail For the production of new elements in the laboratory the process of cold compound nucleus formation is found to be most favorable both theoretically and experimentally However experimentally hot fusion of nuclei has also been used Both the physical and chemical methods of synthesizing new elements are discussed The theoretical approaches considered here are those of the quantum mechanical fragmentation theory the self consistent Hartree Fock theory and the relativistic mean field theory Fission a process inverse to the fusion of two nuclei is also observed to be most favourably a cold phenomenon Other important results are bi modal fission and high n multiplicity fission which leads to the hyperdeformed scission mode Cluster radioactivity is discussed both as a heavy cluster emission process and as super asymmetric fission The theory as well as the present experimental status are reviewed Physics at drip lines is interesting not only for their structural properties but also for their use in the fusion of two nuclei both aspects are discussed

The French Army's Tank Force and Armoured Warfare in the Great War Tim Gale, 2016-03-16 Recent scholarship has challenged the assumption that military commanders during the First World War were inflexible backward looking and unwilling to exploit new technologies Instead a very different picture is now emerging of armies desperately looking to a wide range of often untested and immature scientific and technological innovations to help break the deadlock of the Western Front Nowhere is this better illustrated than in the development of tank warfare which both the British and the French hoped would give them a decisive edge in their offensives of 1917 and 1918 Whilst the British efforts to develop armoured warfare have been well chronicled there has been no academic study in English on the French tank force the Artillerie Sp ciale during the Great War As such this book provides a welcome new perspective on an important but much misunderstood area of the war Such was the scale of the French tanks failure in their first engagement in 1917 it was rumoured that the Artillerie Sp ciale was in danger of being disbanded yet by the end of the war it was the world s largest and most technologically advanced tank force This work examines this important facet of the French army s performance in the First World War arguing that the AS fought the war in as intelligent and sensible a manner as was possible given the immature state of the technology available No amount of sound tank doctrine could compensate for the fragility of the material for the paucity of battlefield communication equipment and for the lack of tank infantry training opportunities Only by 1918 was the French army equipped with enough reliable tanks as well as aircraft and heavy artillery to begin to exercise a mastery of the new form of combined arms warfare The successful French armoured effort outlined in this study including a listing of all the combat engagements of the French tank service in the Great War highlights a level of military effectiveness within
