Measuring your turbo size

OEM Turbo shield sizes are based on two basic measurements. The first measurement is the circumference of the turbo not including the flange. The second measurement is the width of the turbo at it's widest point not including the flanges. After measuring, refer to the chart below to find the correct shield.

Our T22 and T25/26 shields are designed for use on internally gated housings. They will have a cutout in the wastegate area to allow for a tight fitment.
