

### OPERATING INSTRUCTIONS

#### INTRODUCTION

The ALTEC LANSING Model 1270 Power Amplifier provides continuous high power demand where uninterrupted operation is requisite. Designed to protect itself and the acoustic elements it drives, the Model 1270 represents 800 + watts of controlled power. Two channels may be operated independently, in parallel or in bridged configuration to deliver up to 400 watts per channel at less than 0.05% THD from 20 Hz to 20 kHz.

#### Peak Error Computer

The amplifier is provided with a peak/error computer that compares channel input and output signals and detects any output errors. Detection of any peak/error causes the appropriate peak/error indicator to illuminate. Output anomalies detected include excessive voltage, excessive current (load), excessive slew rate, and any other significant difference between the channel input and output signal.

#### Amplifier Protection

The amplifier output is continuously monitored to guard against excessive current drain. An instantaneous VI limiter restricts output to 400 VA,  $\pm 45^\circ$  phase shift. The amplifier is additionally protected against excessive operating temperature; logic circuitry automatically overrides low-speed fan operation and locks to the high fan speed mode. If operating temperature remains excessive, the load is disconnected by a relay and the protection indicator illuminates. When temperature falls to safe operating conditions, the amplifier automatically resumes operation.

#### Load Protection

The load is protected from transients during startup and shutdown of the amplifier. During startup, the load remains disconnected through a relay during a three-

second delay period. During shutdown or loss of power, the load is instantaneously disconnected by the relay. The load is similarly protected against amplifier failure, such as dc voltage at the output.

#### FRONT PANEL CONTROLS AND FEATURES

Item	Name	Function/Description
1	Peak/Error Indicators	Illuminate when excessive voltage, current or slew rate appears at the output terminals.
2	Protection Indicator	Illuminates when protection circuitry operates to prevent damage to the amplifier or load.
3	POWER Indicator	Illuminated when primary ac power is applied to the amplifier.
4	POWER Switch	Applies primary ac power to the amplifier.
5	CHANNEL Volume Controls	Adjust gain of LEFT and RIGHT channels. Rotate clockwise to increase gain.
